 Ornamental Trees, Shrubs, Roses, Vines, Evergreens, Plants, Fruits, Etc.

Our Nurseries are located in the beautiful Orange Valley in which may be seen many places of small and large area that have been improved with trees and plants purchased from us in the years that are passed. To meet the increased and increasing demand for fine Nursery stock, we have added more than one hundred acres to our real estate holdings, nearly all of which, together with our original tract of one hundred and fifty acres, is used for growing trees that will satisfy the most critical. Tested trees and plants are added to our collection as their merit proves them worthy. Our trees are cultivated and cared for, and defective and deformed ones are taken from the rows and destroyed. We allow no accumulation of old and unsalable stock. It is a good practice for intending purchasers to see and select the stock wanted, and we extend a cordial invitation to all interested to visit our Nurseries, which are only sixteen miles from New York City on the Lackawanna Railroad. near Milburn Station. We can be reached from Elizabeth or Newark by trolley lines which pass our office. We are only six miles from these cities.

## Introduction

Our first thought is one of appreciation and thanks to our many friends who have bought our products during the past and whose confidence and patronage have been so great a factor in our success; and then some word of explanation to those receiving this Catalogue who are unacquainted with our Nurseries, the quality of our stock and our methods of business

This book describes briefly and without conscious exaggeration, the staple articles propagated in our nurseries. We do not grow everything; no location is possessed of the necessary soil and climatic conditions to make that possible; but we do claim to have as extended an assortment of the things worth planting over a very large area as can be found in the country.

Having been established since 1882, we can claim experience and ability in propagating and growing trees and plants; and the extent of our acreage and the stock we have are evidence of the success that comes of patronage that continues and increases from year to year. We invite inspection of our place; our nurseries are located in the center of the historic village of Springfield in the Orange Valley, and can be easily and quickly reached by train or trolley or over excellent roads by auto.

We also maintain an office in New York City at 149 Broadway for the convenience of our city customers. As personal inspection is always desirable and also interesting, we invite intending purchasers to call and see our trees and plants at any time.

PRICES. Quoted are for best commercial grade and quality. Trees selected by customers at the nursery will be charged for in accordance to their value. We quote by height but it must be remembered that the height does not always indicate the value of a tree or plant-a very short and compact specimen is more valuable than a slim, straggly one of the same height. Customers can rely upon our selecting full value for the prices charged. We are firm believers in the graded stock system not generally in use in the nursery business. We grade according to height and caliper.

DELIVERY. At prices herein quoted we will deliver free to near-by customers with our own wagons. Distant orders will be safely and securely packed in boxes or bales and delivered F. O. B. cars here, freight or express charges to be paid for by the purchaser.

TERMS. Customers with whom we have had no dealings heretofore should remit with order, or send satisfactory references. Old and known customers can, if they wish, remit on receipt of goods. All accounts are due, net cash, as soon as goods are received. Remit by Check, Draft, Express or Money Order, one and two-cent postage stamps accepted for small amounts.

EARLY ORDERS. Customers should send in their orders as early as possible so we can place them on our digging list. Our work in the digging season is necessarily very much crowded owing to our dependence on the weather conditions, and we can only in exceptional instance fill orders in other than regular turn.

DIGGING SEASON. Usually commences end of September in the fall continuing so long as ground holds open. In the spring from the middle of March until middle of May.

GUARANTEE. We guarantee all our stock true to name and in good condition on leaving our hands, but do not guarantee it to live and grow under all conditions, nor do we make up any loss whatever, due to climate effects, or after culture on the part of the purchaser. In case any mistake should happen in the naming of a plant we will replace it with the true variety as ordered, but we are not liable for more than its original invoice value in refunding money.

## Planting Suggestions

We exercise care in digging, packing, shipping and delivery of our products, thus insuring to the planter the best possible results.

We do not guarantee plants to grow under all conditions, and do not replace stock that perishes on the customer's premises, unless such loss is directly due to negligence or carelessness on the part of our employees.

We have seen stock planted on adjacent places, in the same kind of soil and under like conditions, but the care and treatment different, the one an entire success, the other a failure; and the nurseryman commended or censured accordingly.

If the following instructions are adhered to our stock will grow. unless you are planting some species that are difficult to move such as Sweet Cherry, Birch, Beech, Oak, Tulip and Sweet Gum.

At once on arrival packages should be opened and the trees planted, or if that can not be done, open a trench in mellow moist soil and heel the stock therein, wetting the roots so that the earth will adhere thereto. Do not crowd the trees, and tramp the dirt about the roots that these may be in close contact with the soil. Trees so trenched can later be taken out as wanted and planted.

For permanent planting all trees should be set about the same depth as they were in the nursery but in heeling-in they should be covered deeper. The roots should always be wet before planting thus making the earth adhere closely.
It is of the utmost importance that good well drained soil be used in planting. After the roots are spread in their natural position the earth should be firmly tramped. More failures in transplanting result from lack of compliance with these conditions than from any other cause.
Mulching the surface around newly planted trees is desirable and in dry soil is indispensable for best results. Freshly cut grass, partially rotted manure or straw may be used for this purpose.
We do not approve of indiscriminate and extensive pruning at any period of a tree's life, but if the roots are much shortened, some pruning of the top is necessary to maintain a balance. Beech, Oak, Sweet Gum, Mulberry and Tulip Trees ought to be pruned severely. Cut off mutilated roots. Cut to the trunk or a bud always that you may not later have unsightly and dead spurs that delay the process of healing.
Planting Evergreens is more difficult than planting deciduous trees, particularly if large. and special care must be taken to keep the roots moist. Chances of success are much greater with small and medium sized trees. Choice and rare sorts should be moved with a ball of earth attached when possible.

Another important factor to be considered is the time of planting. Most deciduous trees can be planted in Spring or Autumn, though some varieties are best planted in Spring only. Consult.us on this matter and we will advise you. The Spring planting season opens in latter March while in Autumn plants can be moved in October and until the ground is frozen.

Evergreen Trees and Shrubs can be planted in April and May, and from the middle of August to November, depending upon climatic and weather conditions.

All plants should be copiously watered from time to time unless there are abundant rains.

Herbaceous stock can be planted in Spring or Autumn, preferably in September. Experience proves this the most favorable time and insures best results for the ensuing season. This stock should be well mulched before severe cold weather.

## Landscape Work

To those who have time and who do not wish to employ a landscape architect, the following suggestions are offered:

Endeavor to picture in your mind the appearance of the work when completed, and also what the result will be in after years when the trees and plants have attained their growth.

The first step will be to locate your drives and walks, these should be conveniently placed and as few and short as possible; a slight curve however, is more graceful and pleasing to the eye than a straight line. In grading be sure to have at least a foot of good soil on top. Try to avoid steep terraces; slopes of easy natural curves will keep in order much longer, seldom requiring repair and are easier to care for. If a steep bank is unavoidable, it may be planted with suitable shrubbery in groups.

In placing trees and shrubs, preserve the desirable views, screening the objectionable. Trees with bold outlines, planted at a distance will give character, while masses of the smaller growing and more select varieties will add charm to the foreground. Procure such as are best adapted to the location, are easily taken care of and that will produce a variety of flowers and foliage to make your grounds attractive throughout the year.

In arranging plantings, leave as much open lawn as possible. On the margins plant in masses and beds with large bays and projections to which later new acquisitions may be added. Consider the size of the plants at maturity, placing the largest in the rear and those of dwarf habit in the foreground. Give each room for full development. If immediate effect is desired, the planting can be closely made by placing first what is to remain permanently, allowing ample room for development, then filling between these with plants which are later to be removed.

## ORNAMENTAL DEPARTMENT

## Deciduous Trees

All the trees offered have been one or more times transplanted, are of standard commercial grade, shapely and well rooted. Figures after specific names indicate approximately the height of the trees when approaching maturity.

## Acer - Maple

campestre (English Cork Maple). 20 feet. A small round-headed tree of neat habit and foliage, having a peculiar corky bark Each $5-6 \mathrm{ft}$ \$1.00 8-10 ft. 1.50
colchicum rubrum (Red Colchicum Maple). 20 feet. From Japan. Young growth of wood and foliage bright crimson. Medium size, round and elegant form.
8-10 ft.
10-12 ft.
2.00
dasycarpum (Silver Maple). 60 feet. Well known and popular. Of rapid growth; round, irregular form; leaves light green above, silvery beneath.

-Pyramidalis.
Each
6-8 ft.
-Wieri laciniatum (Wier's Cut-leaved Maple) 50 feet. Leaves finely cut. Habit distinctly pendulous.

Negundo (Box Elder, Ash-leaved Made). 25 feet. A native tree with light green foliage and greenish colored smooth bark.

Each 10
8-10 ft., $11 / 4 \mathrm{in} . ~ . . . . . . . . . . . . . . . . . . . . . . . . .$. . . $\$ 0.75 \quad \$ 7.00$
Pennsylvanicum (Moose-wood or Striped Bark Maple). 25 feet. A rather small tree with large leaves and bark curiously striped green and white. $6-8 \mathrm{ft}$.

Each
platanoides (Norway Maple). 40 feet. A large, round-headed, handsome tree. Foliage dense and dark green, remaining on the tree until late in the Fall. Reliable everywhere, and especially valuable for street planting.

(See Shrubs.)

## Fraxinus - Ash

Americana (American Ash). 50 feet. A tree of rapid growth and large size. An excellent shade and ornamental tree. Each 10

12-13 ft., $2-2 \frac{1}{2}$ in. . ................... $\$ 1.50$ to 2.50
Viridis. A native tree of open growth.
Each
6-8 ft. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 0.75$
6- 8 ft .
$\$ 0.75$

## Fagus - Beech

We especially commend the Beeches for lawn and ornamental planting because of their great beauty and enduring character. When transplanting, be careful to prune severely and judiciously, leaving a good supply of strong, welldeveloped buds. Beeches branched to the ground are in that shape the best trees for screens.
ferruginea (American Beech). 40 feet. A noble tree of large size and round spreading habit. Attractive at all times, but markedly so in Winter and early Spring on account of its light-colored bark.

Each 10
$3-4 \mathrm{ft}$
$4-6 \mathrm{ft}$.
and
sylvatica (English Beech). 50 feet. Of more dense habit than the American, and without its light-colored bark. Makes a handsome, long-lived tree of sturdy and robust character.

Each
$3-4 \mathrm{ft}$. $\$ 1.00$
4-6 ft.
1.25

6-7 ft. . ............................................................................ 1.75
-heterophylla (Fern-leaved Beech). 25 feet. Leaves very much dissected and fern-like. Habit dense and symmetrical. Each
$\$ 0.75$
 -pendula (Weeping Beech). 40 feet. Most unique in habit and form of all weeping trees, and where it has sufficient room for development the best. Makes a large, handsome tree.

4- 6 ft. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 1.50
6- $8 \mathrm{ft} . \quad$. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 2.50

-purpurea (Copper Beech). 40 feet. In character and habit like the English Beech. Foliage of copper color, and not so large as the Rivers.

Each 10
4- 5 ft .
$\$ 1.25$

6-8 ft.
2.00
-pendula (Purple-leaved Weeping Beech). 40 feet. A recent acquisition of merit. Similar in form and appearance to the Weeping Beech except in color of foliage, which is deep purple.

Each
4-6 ft. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 2.00$
6-8 ft.
3.00
-Riversii (Rivers' Beech). 40 feet. Where a large and enduring tree of purple foliage is wanted, no mistake will be made in planting this. Needs full exposure to sunlight for best development and enduring color.
$\qquad$
$4-5 \mathrm{ft}$.
$\$ 1.00$
-6 ft. . .......................................................... 2.00

## Gleditschia - Honey Locust

triacanthos (Three-thorned or Honey Locust). 40 feet. A native tree with delicate foliage. Each 10
5-7 ft. $\$ 0.60 \quad \$ 5.00$

## Gymnocladus - Kentucky Coffee

Canadensis. 35 feet. Of spreading, open habit, with pinnate leaves of a shade not common. Will thrive near the sea. Picturesque and desirable. A tree of great vitality and suited for planting in cities. 4. 6 ft .

Each 10 $\$ 0.70 \quad \$ 6.00$

## Halesia

(See Shrubs.)

## Juglans - Walnut

Japonica. From Northern Japan, and as hardy as an Oak. The leaves are of immense size and of a charming shade of green. The nuts, produced in abundance, grow in clusters. The meat is sweet, of best quality; vigorous tree of handsome form. The trees bear young and are hardier and more productive than the English Walnut.

Each
 3-4 ft. ..................................................... 1.00
nigra (Black Walnut). 50 feet. A very large spreading tree, with pinnate foliage. Well known and valuable both for its nuts and timber, furnishing the well-known walnut lumber of commerce. Each

2.00

## Liquidambar - Sweet Gum

styraciflua. 40 feet. A handsome tree, with star-shaped leaves; desirable for its beautiful Fall coloring. Thrives in low, wet soil, although doing well in all locations. Prune closely. Each
 6-8 ft. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 1.00 8-10 ft.
1.50

## Liriodendron - Tulip Tree

tulipifera. 60 feet. One of our largest native trees, of rapid growth, large, handsome green leaves; flowers in early June, tulip shape, greenish yellow, blotched with orange. Difficult to transplant, except of small size.

[^0]

White-flowering Horse Chestnut.
(See page 3.)

Acer saccharum (See page 3).

Tilia Americana (See page 13.)

Populus fastigiata (See page 10).

## Magnolia

The Magnolia is one of the most profuse blooming trees. Especially is this true of the Chinese and Japanese sorts. Magnolias are not easily transplanted and should be moved when small with balls of earth attached. Since most of them bloom when only a foot or two high, there will not be any long waiting for flowers. Transplant in Spring only.
acuminata (Cucumber Tree). 50 feet. One of the largest Magnolias, of rapid growth, forming a pyramidal tree of much beauty; flowers yellowish white, in latter May.

$3-4$ ft., with ball ..................................... $\$ 1.50$
4-6 ft., with ball ......................................... 2.00
Alexandrina. Pink flowers of medium size appearing quite early.

Each $4-5 \mathrm{ft}$., with ball

Amabilis. A nice white flowering kind. 3-4 ft.

Each
Cordata. Small yellow flowering variety
3-4 ft., with ball ................................................51.
conspicua (Chinese White). 20 feet. Greatly esteemed for its abundant pure white flowers, expanding before the leaves in April. A large specimen is then worth going miles to see. Each 2-3 ft. $\$ 1.50$ $3-4 \mathrm{ft}$.
2.00
glauca (Sweet Bay). 15 feet. A small tree common in the swamps of New Jersey; nearly evergreen. Thrives very well on upland soil, and is esteemed for its delicate, sweet-scented flowers, appearing in June.

Each $2-3 \mathrm{ft}$. $\$ 1.00$ 5-6 ft. 2.00
hypoleuca. 40 feet. From Japan. A stately ornamental tree with large leaves. Good for avenues and streets. Flowers 7 to 8 inches in diameter.

Each $6-8 \mathrm{ft}$.
$\$ 2.50$
Kobus (Thurber's Magnolia). One of the hardiest kinds. It has an even, symmetrical development, branching from the ground, and splendid, shining green leaves that are attractive all the season. In May, fragrant white flowers appear and last longer than those of most kinds.

Each
 5-6 ft. .................................................... . 2.00
Lennei (Lenne's Magnolia). 20 feet. A desirable sort because of its distinct color and abundant bloom. Usually it bears some flowers throughout the Summer. A hybrid.
$\qquad$ ${ }_{1-5}-4$ ft. ..................50
 $6-8$ ft. ............................................................ 50 to 5.00
macrophylla.
3-4 ft.
. $\$ 1.50$
parviflora. 15 feet. From Japan. White. fragrant, globular, pendent flowers, with bright red center.

Each $2-3 \mathrm{ft}$. .$\$ 2.50$

Soulangeana. 20 feet. The best of all the flowering Magnolias; of vigorous growth and most profuse bloom; flowers large, pink on outside of petals and white within, appearing a little later than Conspicua, and before the leaves. Some blooms can be found on a good sized specimen all summer. China.

|  | Each | 10 |
| :---: | :---: | :---: |
| 3-4 ft. | \$1.50 | \$12.50 |
| ${ }_{5-6}^{4-5 \mathrm{ft}} \mathrm{ft}$. | 2.00 2.50 |  |
| $6-8 \mathrm{ft}$. | 3.50 |  |

Speciosa. Flowers white and light purpleremaining on the tree for a long time in good condition.

Each
2-3 ft. ................................................. . $\$ 1.50$

stellata syn. Halleana. 12 feet. A dwarf and valuable species; flowers white, semi-double; fragrant. Earliest blooming variety. Japan.

tripetala (Umbrella Tree). 25 feet. A tree of medium size, with large, fresh green leaves, and large white flowers in latter May. The fruit pods of this and the other native Magnolias change to carmine in Autumn.

|  |  |  |
| :--- | :--- | :--- |
| $3-4 \mathrm{ft}$. | $\ldots$ |  |$.^{\text {Each }}$

## Malus (Pyrus) - Flowering Apple

Coronarius (Fragrant Flowering Crab). 12 feet. Small growing tree bearing profusion of pink blossoms about middle of May.

$$
\begin{aligned}
& \text { 3-4 ft. } \\
& \text { Each }
\end{aligned}
$$

floribunda. 15 feet. Rose-red single flowers, produced in great abundance and very showy. Fruit small, bright red in Autumn.

-Atrosanguinea. A darker flowered variety of M. floribunda-quite conspicuous.

Ioensis (Bechtel's Flowering Crab). 15 feet. Tree of medium size, covered in early Spring with large, double, fragrant flowers of a delicate pink color. Blooms when quite young.

Parkmani. (Parkman's Flowering Crab). 15 feet. The best flowering Apple, bearing in May an abundance of rosy-pink flowers, in bunches, on long stems. The leaves are a shining green. A lovely little tree at all times, especially when in bloom.

Spectabilis, fl. pl. Beautiful pink or white flowers, sweet scented-double of good size.
$\qquad$
Scheideckeri. 12 feet. A double-flowered form of the above. Most attractive. Each
$\qquad$
$\qquad$
$\qquad$

## Morus - Mulberry

New American. 20 feet. Leaves large; black fruit in great abundance throughout nearly the entire Summer.
6-7 ft.
Each

The best dwarf weeping tree; grafted 5 to 6 feet, the branches droop gracefully to the ground. Picturesque and beautiful.

| Medium heads | \$1.00 |
| :---: | :---: |
| First class heads | 1.25 |
| Extra heads | $\$ 1.50$ to 2.00 |
| Double extra heads | 2.50 to 5.00 |

## Nyssa Sylvatica - Sour Gum

A beautiful medium size tree-exquisite fall coloring--but very difficult to transplant. Each, 75c to \$1.00.

## Ostrya Virginica - Iron Wood

A native shrub-useful in low grounds.

$$
5-6 \mathrm{ft} .
$$

Each

## Oxydendron

(See Shrubs.)

## Paulownia - Empress Tree

imperialis. 30 feet. A tree with immense leaves and decidedly tropical appearance, bearing very large panicles of blue, trumpetshaped, sweet-scented flowers in June.

6- 8 ft .
Each
. $\$ 1.00$
8-10 ft. ......................................... $\$ 1.50$ to 2.50
For Dwarf PAVIA, see Shrubs.
Phellodendron - Chinese Cork Tree
Amurense. 30 feet. Of spreading habit; leaves pinnate; resembling the Ash; greenish white flowers in May, and brown, nearly black, berries in Autumn. $\begin{array}{cc}\text { Each } & 10 \\ . \$ 1.00 & \$ 7.50\end{array}$ 6-8 8 ft . $\begin{array}{rr}1.00 & \$ 7.50 \\ 1.25 & 10.00\end{array}$

## Platanus - Plane Tree, Sycamore

occidentalis (American Sycamore, or Buttonwood). 60 feet. Of rapid growth and large size; leaves heart-shaped. with sharp-pointed lobes. Each, $\$ 1.00$ to $\$ 2.50$.
orientalis (Oriental Plane). 60 feet. A lofty, wide-spreading tree of rapid growth, much used in Europe for avenues in cities, and rapidly gaining popularity here for the same purpose.

| purpose. | Each | 10 | 100 |
| :---: | :---: | :---: | :---: |
| 8-10 ft., 11/4 in. | \$1.00 | \$ 7.50 | \$ 60.00 |
| 10-11 ft., $11 / 2 \mathrm{in}$. | 1.25 | 9.00 | 75.00 |
| 11-12 ft., 13/4 in. | 1.50 | 13.00 | 125.00 |
| 12-13 ft., $2-21 / 2 \mathrm{in}$. | 2.00 | 18.00 | 150.00 | 12-13 1 ., $2-21 / \mathrm{in}$ $\$ 3.00$ to 5.0

## Populus - Poplar

alba (Silver Poplar). 40 feet. A rapid-growing, conspicuous tree of great beauty on account of its foliage, which is abundant, dark green above and silvery beneath.

8-10 ft.
Each
............................... $\$ 1.00$
-Bolleana. 3 feet. Of erect pyramidal growth; silvery foliage. A tree of distinct and striking character.

| ¢ ${ }^{\text {c }}$ | Each |  | 10 |  | 100 |
| :---: | :---: | :---: | :---: | :---: | :---: |

$12-14 \mathrm{ft}$., $2-2^{1} / 2 \mathrm{in}$.
$\$ 0.75 \quad \$ 6.00 \quad \$ 50.00$ $1.25 \quad 10.00$
$\$ 1.50$ to 2.50

## Quercus - Oak

Possibly no other species of tree equals the Oak in all its characteristics; certainly none compare with it in enduring majesty. No tree is better suited for avenues on extensive places, and for this purpose it is steadily gaining ground in cities as well, thourh its complete adaptability is by no means established. The large-growing sorts, given room for derelopment, have few equals for lawns. Prune severely when transplanting.
alba (White Oak). 60 feet. A noble and enduring tree of great beauty. Requires a large space for proper development.
$8-10 \mathrm{ft}$. ..................................................... $\$ 2.50$
bicolor (Swamp White Oak). 50 feet. A native species, with handsome, large sinuatetoothed leaves, which turn to a bright scarlet in Autumn.

Each
$6-8 \mathrm{ft}$.
$\$ 2.00$
Cerris (Turkey Oak). 40 feet. Medium size; thick, dense growth; foliage green until killed by frost. Each

coccinea (Scarlet Oak). 50 feet. Makes a large shapely tree, especially attractive in Autumn, when the leaves change to a bright scarlet.

Each

imbricaria (Shingle Oak). A nice tree of no particular value.

Each
$4-6$ ft. .................................................. $\$ 1.25$ 6-8 ft. ...................................................... 1.50
macrocarpa (Mossy Cup Oak). 40 feet. A very beautiful tree, of massive open growth and large, heavy leaves.
6- 8 ft .
$\qquad$
palustris (Pin Oak.) 40 feet. Perhaps the most beautiful of all the Oaks; leaves deep green and finely divided; grown singly, it should be allowed to branch low. Makes a fine avenue tree.

Each 10 8-10 ft., $11 / 1$ in. . . . . . . . . . . . . . . . . . . . . . . . . $\$ 1.50$. $\$ 12.50$ 8-10 ft., 11/2 in. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 2.00 . 17.50
 12-13 ft., $21 / 2-3$ in. . . . . . . . . . . . . . . . . . . $\$ 3.50$ to 5.00
pedunculata (English Oak). 40 feet. Leaves long and much divided, retaining their green color until killed by heavy frosts.
6-8 ft. ......................................................... $\begin{array}{r}\text { Each } \\ \$ 1.00\end{array}$
—fastigiata. (Pyramidal Oak). Medium size and erect habit, like the Lombardy Poplar.

Each
Phellos (Willow Oak). 40 feet. Of medium size and pyramidal form, leaves long and entire, like the Willow, very persistent, and retaining their green color until late in Autumn. Each $6-8 \mathrm{ft}$.
. $\$ 2.00$
Prinus (Chestnut Oak). 30 feet. One of finest species, resembling a Chestnut tree.
$8-10 \mathrm{ft},. 11 / 4 \mathrm{in}$.
$8-10 \mathrm{ft} ., 11 / 2-2 \mathrm{in}$.
Each
8-10 ft., $11 / 2-2$ in. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 2.00$ to 3.00

Robur. ped. concordia (Golden Oak). 25 feet. A rare sort, with golden-yellow foliage in Soring and early Summer. Perhaps one of the best golden-colored foliage trees.

$$
2-3 \mathrm{ft} .
$$

Each
rubra 70 feet Makes a large and attractive tree. The young leaves and shoots are red in Spring, and in Autumn the foliage turns a purplish crimson.

## Rhamnus

(See Shrubs.)

## Rhus

(See Shrubs.)

## Robinia - Locust

pseudacacia (Black or Yellow Locust). 50 feet. A native tree of large size and rapid growth. Leaves pinnate, of a lovely tint of green. The flowers, which are abundant. are borne on long pendulous racemes, and are white or yellowish in color and fragrant. Flowers in early June.
$4-6$ ft. ........................................................... $6-8 \mathrm{ft}$.
\$0.50

## See also Shrubs. <br> Salisburia

Adiantifolia (Ginkgo, or Maiden Hair Tree). 40 feet. One of the most beautiful of Japanese trees. Medium size; growth quite rapid and very handsome; distinct fan-like foliage.

## Salix - Willow

Babylonica (Weeping Willow). 40 feet. A well-known and particularly graceful tree.

12-14 ft. . .............................................. to 3.50
Solomoni (Solomon's Weeping). Very similar to Thurlow's Weeping Willow - slightly more pendulous. Each 10

Caprea (Pussy Willow). The well known kind.

pentandra (Laurel-leaved Willow). 25 feet. Foliage bright shining green, adherent until late Autumn. A valuable seashore tree.

rosmarinifolia (Rosemary Willow). 8 feet. Grafted 5 feet high, makes a handsome dwarf ornamental tree, with light green foliage and

Platanus Orientalis (See page 10).

Morus pendula (See page 10 ).

Salix Babylonica (See page 11).

Cerasus Japonica pendula (See page 6).

## WILLOWS-Continued

elegantissima (Thurlow's Weeping Willow). 40 feet. Similar to, but more upright-growing than Babylonica. Is a better grower and a more hardy tree

Each 10 6- 8 ft . $\$ 0.75 \quad \$ 5.00$
 12-14 ft. ............................. $\$ 2.00$ to 3.50
vitellina aurea (Golden Bark Willow). 25 feet Bark of a golden color; especially attractive in Winter:
$\begin{array}{ll}\text { Each } & 10 \\ \$ 0.30 & \$ 2.50\end{array}$ 3-4 ft. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 0.30 \quad$. $\$ 2.50$ $-6 \mathrm{ft}$ $75-50$
-Britzensis. 25 feet. Conspicuous in Winter, when its red bark is most attractive.

|  | Each | 10 |
| :---: | :---: | :---: |
| 3-4 ft. | . $\$ 0.35$ | \$3.00 |
| 4-6 ft. | . 50 | 4.50 |

-pendula. One of the newer kinds, of splendid weeping habit. It is considered hardier than Salix Babylonica and will be more desirable on that account.

Each 4-6 ft. \$0.75 $6-8 \mathrm{ft}$.
. 00
Wisconsin (Weeping). Similar to Babylonian Willow-but hardier. Each, 50c to $\$ 1.50$.

## Sophora

Japonica (Pagoda Tree). 25 feet. A tree quite rare and of distinct character, bearing abundant racemes of yellowish-white flowers in August when almost no other tree is in bloom.

Each $3 \times 4 \mathrm{ft}$.
\$0.75 $4-5 \mathrm{ft}$.
1.00
—pendula (Weeping Sophora). 12 feet. Grafted on stems 6 feet high, it makes a tree of unique and attractive character.

Each $6-7 \mathrm{ft}$
. $\$ 2.50$

## Sorbus - Mountain Ash

Aucuparia (European Mountain Ash). 25 feet. Handsome small tree, with pinnate foliage and bearing clusters of bright red berries in Fall. Each 10
 10-12 ft. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 1.50 . 12.50 10-12 ft., 2 in. . .......................... . . . . . . . 2.00 17.50
—pendula (Weeping Mountain Ash). 15 feet. Grafted 5 to 6 feet high forms a spreading tree of much beauty.

Quercus pedunculata atropurpurea. Purple. - concordia. Golden.

## Trees with Bright Colored Bark in Winter

Salix vitellina aurea.

Salix Britzensis.

## DECIDUOUS SHRUBS

The use of shrubbery about the home adds materially to the beauty and attractiveness of the place, and affords opportunity for a display of artistic development with the varying color of foliage and flowers, and different habits of growth. Shrubs provide material of a permanent character for the adornment of property at less cost and more effectively than anything else.

## Pruning

The practice of indiscriminate pruning of shrubs in Winter should be discouraged since, by doing so, you will in most sorts cut away the flower-bearing wood. and when the season of bloom is come suffer disappointment in consequence.

The early April, May and June shrubs are of this character, and what pruning they receive should be done after the period of bloom.

The late Summer and Fall-blooming species bear flowers on wood of the same season's growth, and the more of this you have the greater the amount of bloom. Severe Winter pruning tends, for a time at least, to encourage strong new growth, though unquestionably it tends, too, to lower vitality, and should not, therefore, be practiced continually.

Indeed, the object of pruning should be chiefly to accentuate the beaties of natural forms, which are always best, and should as much as possible be sought for. To this end thin judiciously and cut back sparingly, remembering to do this at the seasons and for the reasons stated. It is better in small places to use small and dwarf shrubs and allow free development, rather than the large-growing sorts that, to be kept within bounds, must suffer mutilation and disfigurement.

Figures after specific names indicate approximately the height of the shrubs when annroaching maturity.

## Abelia

rupestris. 4 feet. Native of China. Is of dwarf habit and flowers profusely all Summer. The flowers are in compact clusters, very fragrant; requires protection in the North.
2 year . $\$ 0.50$

## Acer Japonicum - Japanese Maple

The Japan Maples are trees of dwarf habit, with very graceful and often deeply colored foliage. They may be treated as shrubs in masses, and for this reason we group them separately. There are a great many variations in these trees, but we select only the most pronounced, hardiest and best.
-aureum (Golden-leaved Maple). 10 feet. A rare and distinct variety. Foliage of pronounced golden color.

polymorphum (Green Leaved). 15 feet. The parent type of most Japan Maples and a shrubby tree of very great merit. Of slow growth, dense habit. and deeply lobed foliage. The very best if natural green is wanted.

Each
3-4 ft.
$\$ 0.75$
4-6 ft. ......................................................................... . . . . 1.50
—atropurpureum. (Purple Leaved). 10 feet. The most popular variety. Foliage of intense purple, and in early Spring especially beautiful. Is effective grown singly or in groups.

—dissectum. (Green Cutleaf). 5 feet. The foliage of this and the next variety is indeed most handsome, the habit dwarf and pendulous. A lovely little tree.

—atro-purpurea dissectum (Purple Cutleaf). 6 feet. A variety with deeply cut almost fernlike foliage of dwarf and pendulous habit. Foliage green and purple, and tree hardy.

Tataricum Ginnala (Tartarian Maple). 12 feet. A shrubby tree with divided leaves. Good for grouping, or singly on small lawns or in angles.

|  | Each | 10 |

Carolina. 4 feet. The tall-growing Wild Rose, with single pink flowers during the Summer months; its bright red fruit is very showy.

lucida. 3 feet. A native sort of rather dwarf habit. Bears rosy-pink, single flowers in early June, and red fruit in the Fall. Showy in masses on the borders of a wood.

|  | Each | 10 |
| :---: | :---: | :---: |
| -21/2 ${ }^{\text {ft. }} \mathrm{ft}$. | . 35 | $\$ 2.00$ 3.00 |

multiflora Japonica. 6 feet. Of very robust habit, making long, arching canes. Covered in June with white fragrant flowers, followed by scarlet hips adherent all Winter.

rubiginosa. 4 feet. The well-known Sweetbrier. The whole plant exhales a delightful

rubrifolia (Purple-leaved Rose). 4 feet. This is valued for its beautiful reddish-green foliage, as well as for its pink flowers in early June. It is one of the most attractive shrubs, especially when set among a mass of other shrubs or when planted by itself $\begin{array}{ll}\text { in large groups. } \\ 18-24 \text { in. } & \text { Each } \\ \$ 2 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .25 ~ \\ \$ 2.00\end{array}$

rugosa (Japan Rose). 4 feet. We class this among shrubs, for while it will adorn any location, we especially recommend it for the shrubbery border. Its vigorous robust habit, handsome foliage and flowers especially recommend it. The latter possess a delightful fragrance, and are followed by large bright hips, that prolong the attraction of the plant well into the Winter. Hardy everywhere and should be planted by everybody.

-alba. 4 feet. Similar in all respects to the preceding except in color of flowers, which are pure white.

-Belle Poitevine. Bright pink; buds long and perfumed. Each, 35c; ten, $\$ 3.00$.
-Blanc double de Courbet. Pure white, blooming in clusters; double; very sweet; flowers nearly five inches in diameter, produced freely and lasting well. Each, 35 c; ten, $\$ 3.00$.
-Conrad Ferdinand Meyer. A strong, robust grower, with stout stems thickly covered with prickles. Flowers are delightfully fragrant, large and double; clear silvery rose. Each, 35c; ten, \$3.00.
setigera (Prairie Rose). 5 feet. Of most vigorous growth and clean, healthy foliage, bearing in July a profusion of delicate pink single flowers on long, arching canes.

## Roses

The Rose is the "queen of flowers" and all flower lovers are striving continually to secure and cultivate the best. They are confused often by the plethora of varieties offered.

Their exquisite form and shades in color and their effectiveness for house adornment commend them to all. Their culture is not easy. They require a rich and well drained soil and high culture with abundant plant food.

Mulching at all seasons and close planting insure best results. Before planting prune them severely and indeed annually thereafter. This remark does not apply to climbing roses which must not be so pruned. It is usually enough to cut out old and decaying branches and if desirable shorten the longest shoots. The other sorts here considered bear their flowers on new wood and to secure good blooms a vigorous growth is necessary.

Insect control is essential. Use a tobacco solution for the green aphis; use a tobacco water solution with arsenate of lead as poison for all eating insects. The rose chafer or beetle can only be controlled by catching 'em alive and killing 'em dead.

As soon as the leaves are developed the Rose caterpillar appears and must be looked for and destroyed daily by pinching in its shelter of leaves glued together.

To aid intending purchasers we classify roses as June flowering (Hybrid Perpetuals) ; everblooming (Teas and Hybrid Teas) and the Baby Rambler (Polyantha) type, also everblooming.

The first bloom abundantly in June and some sorts sparingly in Autumn. Are hardier, more easily grown and produce the finest and best flowers. They bear neglect better and are suited for those who are unwilling or unable to give the attention required for the Tea and Hybrid Tea roses. But for great variety in form and shades of color these are the best and under favorable conditions will bloom continuously from June to November.

The Polyantha roses are recommended for their dwarf habit, their suitability for borders and in masses. Flowers are borne in clusters in pink, red and white and a new variety has distinctly yellow buds, becoming white when fully blown. They bloom all Summer and in masses are effective for house decoration. Are of easy culture.

Use Roses abundantly, care for them intelligently and be rewarded by magnificent flowers. Potted Roses are desirable for late Spring and Summer planting.

## Hybrid Perpetual Roses, or June Roses

These are the June Roses, so admirably suited for garden culture, the formation of beds, hedges and permanent plantations, where hardy varieties are desired. In May and June these hardy Roses are brilliant with large, perfumed flowers of richest colors; far excelling the everblooming class in size and vivid effect. Many of those offered give occasional flowers through the Summer, and again in Autumn. All varieties 25 c each and $\$ 20.00$ per hundred, except where otherwise noted.
Alfred Colomb. Extra large flowers, very double; color clear cherry red. Very fragrant.

American Beauty. Large, double flowers, valuable both for house and garden culture. Color rich rosy crimson, fragrant. 35c each.
Anna de Diesbach. Color, brilliant carmine.
Baron de Bonstettin. Large flowers, very double; color, rich dark red; highly scented.
Baroness Rothschild. Color, bright rosy pink.
Clio. Flesh color. One of the finest Roses, having the most delicate texture and coloring.
Duke of Edinburg. Dark, velvety maroon; medium size; very handsome and fragrant.
Fisher Holmes. Dark, rich scarlet, passing to deep velvety crimson.
Frau Karl Druschki. Of strong, upright growth. Flowers extra large, of purest possible white. 35 c each.

Killarney White (See page 29).

Gruss an Teplitz (See page 29)

Jonkheer J. L. Mock (See page 29).

Prince de Bulgaria (See page 29).

Sunburst (See page 29).

Kaiserin Augusta Victoria (See page 29)

## ROSES--Continued

General Jacqueminot. Bright, shining crimson, very rich and velvety; one of the most desirable.
Gloire de Dijon. A magnificent Rose in every respect; large, double and tea-scented; color rich, creamy white, beautifully tinged with amber and pale blush.
Hugh Dickson. Brilliant crimson, shaded scarlet; large size; highly perfumed; free flowering.
Louis Van Houtte. Crimson-maroon; medium size.
Mabel Morrison. Extra large; color pure snow white, sometimes faintly tinged with pink.
Mme. Gabriel Luizet. One of the most beantiful of all Roses; large, double and fragrant; color an exquisite shade of clear rose.
Mme. Plantier. Is the most profuse blooming, white hardy Rose in cultivation.
Magna Charta. Extra large, very double; color bright rose.
Margaret Dickson. In color, it is the most beautiful waxy white.
Marshall P. Wilder. Large; color bright scarlet-crimson, richly shaded with maroon; fragrant.
Mrs. J. H. Laing. This is one of the finest Roses of its class; soft delicate pink with a satin tinge; very fragrant.
Mrs. R. G. Sharman Crawford. Deep, rosy pink, white at base of petals; flowers are large and fragrant.
Paul Neyron. Flowers of immense size; color deep, clear rose.
Perle des Blanches. A splendid white Rose of good form; very double and fragrant.
Persian Yellow. Dark golden yellow, single.
Prince Camille de Rohan. Deep, rich. velvety crimson, passing to intense maroon, shaded black.
Soleil d'Or. Flowers large; color varies from gold and orange-yellow to reddish gold. 35c each.
Ulrich Brunner. Flowers large, with shellshaped petals; color cherry red.

## Hybrid Tea Roses, or Everbloomers

This class includes some of the finest varieties. They are very free flowering, fragrant and beautiful, but need some protection during the Winter.

All varieties, 35 c each, and $\$ 25.00$ per hundred, except where otherwise noted.
Chateau de Clos Vougeot. Deep, velvety crimson; free bloomer; very fragrant. Each, 50 cents.
Countess of Gossford. Clear salmon pink. Each, 50 cents.
Duchess of Wellington. Saffron-yellow, changing to a coppery-yellow of a distinct shade. Each, 50 cents.
General MacArthur. Vivid crimson-scarlet, the most beautiful shade of any garden Rose, retaining its brilliancy when expanded. Each, 50 cents.
Gruss an Teplitz. One of the best growers and most profuse bloomers of this class of Roses; color bright scarlet; very fragrant.

Geo. C. Waud. Orange; fine color. Each, 50 cents.
J. B. Clark. Scarlet, shaded crimson-maroon; fragrant.
Jonkheer J. L. Mock. Clear pink, reverse of petals rosy. silvery white; blooms of magnificent size and form, produced on stiff, erect stems.
Kaiserin Augusta Victoria. Pure white, large buds and superb, fuli, double blooms, making choicest cut flowers.
Killarney. Brilliant pink with large, pointed buds; one of the very finest.
Killarney White. Same habit as Pink Killarney, but of pure white color.
Lady Ashtown. Soft rose, shading to yellow at the base of the petals.
Lady Hillingdon. Deed apricot yellow to orange; long. pointed buds. Free flowering. Each, 50 cents.
La France. Silvery rose, with nink shades and satin-like petals of unsurpassable beauty; large, symmetrical and deliciously fragrant blooms.
Madame Abel Chatenay. A good grower and perpetual bloomer; beautiful in bud and bloom; petals of rose pink, with a tinge of salmon. Each, 50 cents.
Madame Caroline Testout. Large, clear, satin rose; very vivid; petals bordered with tender rose; very fragrant.
Madame Jules Grolez. Bright rose; very floriferous; splendid for bedding and massing. Often called the Red Kaiserin. Each, 50 cents.
Madame Segond Weber. Rosy salmon; large flowers. Each, 50 cents.
Maman Cochet. Rich, rosy pink, shaded silvery rose on outer petals; exquisite in color and graceful in form from bud to bloom.
Melody. Saffron yellow. Each, 50 cents.
Mevrouw Dora van Tets. Deep glowing crimson, with velvety shading; retains its fiery red color in the open flower. Each, 75 cents.
Mrs. Aaron Ward. A most striking color. Indian yellow, shading to lemon cream at edges of petals. Each, 50 cents.
Mrs. Chas. Russell. Exquisite pink with rosy, carmine center. Petals of good substance; bud long and solid. Each, 50 cents.
Mrs. Geo. Shawyer. Brilliant rose pink; flowers large and well-formed; free bloomer and good grower. 50 cents each.
Ophelia. Salmon flesh, shaded with rose on outer edges of petals. Each, 50 cents.
Prince de Bulgarie. Deep, rosy salmon; large full flower. Elach, 50 cents.
Radiance. Brilliant, rosy carmine, shaded with rich pink.
Reine Marie Henriette. Beautiful red.
Richmond. Scarlet crimson of most brilliant hue; long pointed buds.
Souvenir du President Carnot. Superb in color. Delicate flush white, shaded a trifle deeper at the center, very slightly suffused with fawn. Each individual flower distinctly apparent on a long stiff stem. Each, 50 cents.
Sunburst. Orange-copper and golden yellow, giving an extremely brilliant effect. Each, 50 cents.

Frau Karl Druschki (See page 27.)

Excelsa (See page 31).

Mrs. John Laing (See page 29).

Baby Dorothy Perkins (See page 31).

Gen. Jacqueminot (See page 29).

Paul Neyron (See page 29).

## ROSES-Continued

William R. Smith. Creamy white with shadings of pink; beautiful in form and colors. Each, 50 cents.

## Polyantha Roses, or Baby Ramblers

 25 cents each, unless otherwise noted.The Polyantha or Baby Rambler Roses are a distinct class of Everblooming Roses, distinguished by their dwarf, bushy habit of growth, mediam size and very double flowers, borne in large clusters. They are vigorous growers and constant bloomers.
Baby Dorothy. Carnation pink; habit and growth similar to Baby Rambler.
Baby Rambler. Rosy crimson; very free flowering; dwarf habit; very useful for massing.
Baby Tausendschon. Blooms of veined rose with edges of soft, clear pink. A fine novelty, each bush forming a symmetrical bouquet.
Catherine Zeimet, or White Baby Rambler. Pure snow white double blooms in clusters. A compact, bushy grower of dwarf habit.
Clothilde Soupert. A wonderful Rose for bedding or pot culture; medium size and very double; white, shading to a deep pink at the center; a profuse bloomer and strong dwarf grower. Each, 35 cents.
Erna Teschendorff. Carmine red; blooms from May to end of October.
Jessie. Bright, cherry crimson. Excelling all Baby Rambler in beauty of color. Splendid for pot culture, bedding and massing; blooms constantly until frost.
Mademoiselle Cecile Brunner. Rosy pink on a rich, creamy-white ground, shaded light salmon pink. Each, 35 cents.
Mrs. W. H. Cutbush. Flowers in large trusses and of a beautiful pink color. A charming, perpetual flowering Polyantha.
Orleans. Brilliant red, suffused rose and deep cerise; bushy habit; grows and blooms freely. The showiest and prettiest of the pink "Baby" varieties.
Yellow Baby Rambler. Color is deep, golden yellow in the bud, changing to lemon yellow as the flowers open. Under strong sunlight the open flowers will sometimes become nearly white. Each, 35 cents.

## Climbing Roses

2 to 3 ft ., 25 cents; 3 to 4 ft ., 35 cents, each, except where noted.
American Pillar. Large single flowers of rich, rosy pink. A valuable climber. 2 to 3 ft ., each, 35 cents; 3 to 4 ft ., each, 50 cents.
Aviateur Bleriot. The new Yellow Climber. A strong grower, with beautiful foliage and large clusters of medium-sized flowers.
Crimson Rambler. An exceedingly vigorous, rapid grower; handsome, rich, glowing crimson flowers, which are semi-double and borne in immense clusters in the greatest profusion. 2 to $3 \mathrm{ft}$. , each, $25 \mathrm{c} ; 10, \$ 2.00 ; 100$, $\$ 15.00$. 3 to $4 \mathrm{ft}$. , each, $35 \mathrm{c} ; 10, \$ 3.00 ; 100$, $\$ 20.00$.

Climbing American Beauty. Same as its namesake in size, color and fragrance, with the addition of the climbing habit. 2 to 3 ft ., each, 50 cents; 3 to 4 ft ., each, 75 cents.
Dr. W. Van Fleet. A delicate shade of flesh pink, deepening to rosy flesh in the center; high center, petals beautifully undulated and cupped; buds pointed, flowers full and double, open to an immense diameter, sweetly perfumed. Beautiful bronze-green foliage. 2 to 3 ft ., each, 35 c . 3 to 4 ft ., each, 50c.
Dorothy Perkins. Beautiful shell-pink color, which holds for a long time, fading finally to a lovely, deep rose; very sweet scented; fully equal to Crimson Rambler in foliage, hardiness, habit of growth and blooming qualities. 2 to $3 \mathrm{ft} .$, each, $25 \mathrm{c} ; 10, \$ 2.00 ; 100$, $\$ 15.00$. 3 to 4 ft ., each, $35 \mathrm{c} ; 10, \$ 3.00 ; 100$, \$18.00.
Excelsa or Red Dorothy Perkins. Intense crimson scarlet; double flowers in brilliant clusters, set in glossy, shining foliage. Extremely vigorous and the handsomest of all red climbers.
Gardenia. A Wichuraiana Hybrid. Good grower and fine foliage; cream colored flowers.
Hiawatha. Glowing ruby crimson, with a clear, white eye; single flowers in clusters; light, glossy, green foliage; excellent for climbing, trailing or forcing.
Miss G. Messman. Climbing Baby Rambler. A true everblooming Crimson Rambler, a climbing sport from the original Crimson Baby Rambler, Mme. Norbert Levavasseur.
Pink Rambler. Old fashioned, well known climber. Single flowers.
Silver Moon. Silvery white with a mass of bright yellow stamens; petals of splendid substance and beautifully cupped; exceedingly large, fragrant flowers; very free bloomer; desirable climber. 2 to 3 ft ., each, $50 \mathrm{c} ; 10, \$ 4.00$. 3 to 4 ft ., each, $75 \mathrm{c} ; 10, \$ 6.00$.
Tausendschon or Thousand Beauties. Varying shades from a delicately flushed white to a deep pink or rosy carmine, in bright clusters of blossoms, almost covering the handsome, pale green foliage; a vigorous, hardy climber with few thorns.
White Dorothy Perkins. A pure white sport from Dorothy Perkins, with which it is identical in foliage and habit. A valuable addition to the hardy climber class.
White Rambler (Thalia). Of Crimson Rambler type, but bearing innumerable clusters of small, pure white flowers.
Wichuraiana (Memorial Rose). Creeping sort, with small, dark green and shining leaves. Flowers single, white, with prominent yellow stamens. Good for covering banks, rocks or similar places. 2 to 3 ft ., each, 25 c ; $10, \$ 2.00 ; 100, \$ 12.00$. 3 to 4 ft ., each, 35 c ; 10 , \$3.00; 100, \$15.00.
Yellow Rambler (Aglaia). The only yellow hardy climbing Rose. Similar to Crimson Rambler except in color but not quite so hardy.

## Moss Roses

Moss Rose. Old-fashioned pink and white. Each, 25 cents.

# Rubus Odoratus - Flg. Raspberry 

$\qquad$ 3-4 ft.
$\$ 2.0$

## Syringa - Lilac

The Lilac is a well-known and deservedly popular shrub. Its thick leathery foliage and lovely sweet-scented flowers commend it to all. There are no better sorts than the oldfashioned purple and white varieties, but there are many whose bloom is as good and that are much more floriferous. We, therefore, heartily commend the other varieties listed here.
 (Except where otherwise noted.)
Japonica (Japan Lilac Tree). From Japan. where it attains the height and dignity of a tree. It is of upright growth with heavy, strong branches. The foliage is abundant and of leathery texture. Flowers white, late, a month after other Lilacs, in large terminal panicles. A most satisfactory shrubby tree.

Josikaea (Hungarian Lilac). Fine, distinct species, of tree-like growth, with dark, shining leaves and purple flowers in June, after the other Lilacs have finished flowering.
villosa (Hairy-leaved Lilac). 6 feet. One of the newer species quite distinct from the older Lilacs. Foliage large, not unlike that of the White Fringe. Flowers later than the others, rosy pink, and in large panicles. A very desirable species.
Persica (Persian Lilac). 5 feet. Purple. A profuse and early-blooming sort, bearing light purple flowers.
-alba. 5 feet. Same habit and form as the preceding, but almost white flowers.
-Rothomagensis. 5 feet. Beautiful, reddish purple, large, fine and free-blooming. One of the best.
-Saugeana. Similar to the above named variety.
vulgaris (Common Purple Lilac). 8 feet. Known everywhere and valued for its abundant sweet-scented flowers.
-alba (Common White Lilac). 8 feet. Whiteflowering variety; not so strong a grower as the purple.
-Alphonse Lavalle. Very large panicle, beautiful blue, shaded violet. Each, 50 c to $\$ 1.00$.
-Charles X. 5 feet. An old Lilac, but still in demand for its abundant large panicles of reddish-purple flowers. Each, 50c to $\$ 1.00$.
-Madame Casimir Perier. 5 feet. Creamy white; superb. Each, 50c to $\$ 1.00$.
-Madam Lemoine. 4 feet. Superb double white. Each, 50c to $\$ 1.00$.
-Marie Le Graye. 5 feet. Large panicles of fragrant white flowers. Each, 50 c to $\$ 1.00$.
-Michael Buchner. 4 feet. Pale Lilac. Double.
-President Grevy. 5 feet. A beautiful blue; individual flowers very double and very large; the panicle is magnificent; one of the finest Lilacs. Each, 50c to $\$ 1.00$.
-Rubra de Marly. 5 feet. Similar in growth to the Common Lilac, bearing purplish flowers. Used for forcing by the Parisian florists. Each, 50c to $\$ 1.00$.
-Souvenir de la Spaeth. 4 feet. The most distinct and beautiful of all the Lilacs; panicles immense and very compact; flowers very large, deep purplish red. Each, 50c to $\$ 1.00$.
-Virginalis alba. Pure single white. Each, 50 c to $\$ 1.00$.
-Wm. Robinson. Beautiful violaceous mauve; double. Each, 50c to $\$ 1.00$.
(See also Deciduous Trees.)

## Tamarix - Tamarisk

Tall shrubs, native of the Eastern hemisphere, but generally hardy in America, especially near the sea, where they thrive exceptionally well. Leaves bright green in color, small and delicate. Flowers pink or rose colored, in panicles.
Africana. 8 feet. Blooms in May; an upright

| grower. | Each | 10 | 100 |

## STANDARD SHRUBS IN TREE FORM

We cultivate a variety of shrubs in tree form, and in certain locations they produce a very good effect. Among the most satisfactory and best we name: ALTHEAS, HYDRANGEAS, LILAC, PRIVET and SNOWBALL.

## SHRUBS BEARING ORNAMENTAL FRUITS

Berberis. (Barberry.) In variety.
Callicarpa purpurea.
Cornus. (Dogwood.) In variety.
Elaeagnus. (Silver Thorn.) In variety.
Euonymus. (Strawberry Tree.) In variety.
Mex rerticillata. (Black Alder.)
Ligustrum. (Privet.) In variety.
Lonicera. (Bush Honeysuckle.) In variety.

Rhodotypos.
Rhus. (Sumach.) In variety.
Ribes. (Flowering Currant.)
Rosa. (Rose.) In variety.
Sambucus. (Elder.) In variety
Symphoricarpos. (Snowberry.) Red and white.
Viburnum. (Snowball.) In variety.

## SHRUBS WITH VARIEGATED FOLIAGE

Berberis purpurea. (Purple Barberry.)
Kerria variegata.
Cornus. (Dogwood.) In variety.
Ligustrum aurea. (Golden Privet.)
Corylus purpurea. (Purple Hazel.)
Prunus Pissardi. (Purple-leaf Plum.)
Diervilla variegata. (Weigela.)
Sambucus nigra aurea. (Golden Elder.)
Hibiscus variegata. (Rose of Sharon.)
Spiraea opulifolia aurea. (Golden Spirea.)

## SHRUBS WITH BRIGHT COLORED BARK IN WINTER

Cornus alba. Bright red.
-elegantissima variegata. Bright red.
-Sibirica. The most brilliant red of all.

Cornus stolonifera. Dull red or purplish.
Kerria Japonica. Green.
-flore pleno. Green.

## SHRUBS SUITABLE FOR PLANTING IN SHADY SITUATIONS

Berberis. (Barberry.) In variety.
Ceanothus. (Jersey Tea.)
Clethra alnifolia. (Sweet Pepper Bush.)
Cornus alba. (Red Branched Dogwood.)
—paniculata. (Red Osier.)
Diervilla. (Weigela.) In variety.
Forsythia viridissima.
Ligustrum. (Privet.) In variety.
Lonicera fragrantissima. (Fragrant Bush Honeysuckle.)

Mahonia aquifolia.
Myrica cerifera. (Wax Myrtle.)
Rhus aromatica. (Fragrant Sumach.)
Symphoricarpos racemosus. (Snowberry.)
-vulgaris. (Red Fruited Snowberry.)
Viburnum acerifolium. (Arrow Wood.)
-cassinoides. (White Rod.)
-dentatum. (Arrow Wood.)
-Lentago. (Sheep Berry.)
-tomentosum.

## SHRUBS FOR SEASHORE PLANTING

Baccharis halimifolia. (Groundsel Shrub.)
Berberis. (Barberry.) In variety
Cornus. (Dogwood.) In variety.
Hippophae rhamnoides. (Sea Buckthorn.)
Ligustrum vulgaris. (Common Privet.)
Myrica cerifera. (Wax Myrtle.)
Rosa rugosa. (Japanese Rose.)
Tamarix. (Tamarisk.)

Lonicera Halleana.

Ampelopsis Veitchii.

Clematis paniculata.

Clematis Jackmani.

Wistaria.

## CLIMBING VINES

Those kinds that cling to smooth, perpendicular surfaces by little tendrils or roots we designate as self-climbers, and are the kinds suited to covering walls and buildings. The others require a trellis or support of some sort.

## Actinidia

arguta (The Silver Vine). A Japanese vine of rapid growth, with large leaves, and white flowers with purple center, followed by edible fruit. Each $10 \quad 100$ 2 yr. ............................... . $\$ 0.35$ \$3.00 $\$ 20.00$

## Akebia

quinata (Five Leaved Akebia). A beautiful, rapid-growing vine, bearing curious plumcolored, cinnamon-scented flowers

Eac
10
2 yr .
$\$ 0.35$
3.0

## Ampelopsis

Engelmanni Self Climber. Is being used to a large extent in the West on account of its hardiness. Otherwise very much like the ordinary Virginia Creeper.

|  | Each | 10 | 100 |
| :---: | :---: | :---: | :---: |
| 2 yr., 1st. class | \$0.25 | \$2.00 | \$12.00 |
| 2 yr ., extra | . 35 | 3.00 | 15.00 |

heterophylla, vitis (Variegated Grape). Self climber. A very pretty vine with deeply lobed leaves like the Grape, marbled with white, pink and green. Berries light blue 2 yr
quinquefolia (Virginia Creeper). Self climber. A very useful and handsome climbing shrub, of vivid crimson color in Autumn.

|  | Each | 10 | 100 |
| :---: | :---: | :---: | :---: |
| 2 yr., 1st. class | \$0.25 | \$2.00 | \$12.00 |
| 2 yr ., extra | . 35 | 3.00 | 15.00 |

Veitchii (Boston Ivy). Self-climber. Of delicate and graceful habit, and most desirable of all for covering buildings.

|  | Each | 10 | 100 |
| :---: | :---: | :---: | :---: |
| 2 yr., 1st. class | \$0.25 | \$2.00 | \$12.00 |
| $3 \mathrm{yr} .$, strong | . 35 | 3.00 | 15.00 |

## Aristolochia - Dutchman's Pipe

Sipho. A robust, vigorous plant, bearino curious pipe-shaped flowers. Very large leaves.

## Bignonia

radicans (Common Trumpet Vine). Selfclimber. Abundant flowers in July and August; a rampant grower; good for concealing unsightly objects.
$2-3 \mathrm{ft}$.
$3-4 \mathrm{ft}$.
Each 10100
$\$ 0.25 \quad \$ 2.00 \quad \$ 15.00$
grandiflora (Chinese Trumpet Vine). More dwarf than radicans and of nearly shrubby habit. Blooms when quite small, bearing yellowish-scarlet flowers in great profusion.

## Celastrus

Known as Staff Vine, Bitter Sweet, etc. A very vigorous grower. Its scarlet fruit, adherent nearly all Winter, is an object of much beauty.

2 yr. . . . . . . . . . . . . . . . . . . . . . . . . $\$ 0.35 \quad \$ 2.50 \quad \$ 20.00$

## Clematis

Among climbing plants none equal the Clematis in the beauty of their flowers. There are an infinite number of varieties among the large-flowering sorts, from which we select the most distinct and vigorous in habit and the most floriferous.

## LARGE-FLOWERING SORTS.

Duchess of Edinburgh. Fine, large, double white flowers.
Gipsy Queen. Deep purple.
Henryi. Large flowering. Flowers white, handsome and abundant. The best white variety
Jackmani. Large, intense violet purple, remarkable for its velvety richness, free growth and abundant bloom. The best variety of its color.
Mad. Andre. New single crimson, free blooming and very fine.
Ramona. A strong. rampant grower, and a true perpetual bloomer, flowers appearing on the last year's growth and on the new shoots, giving an abundance of bloom all through the season. Color deep, rich lavender.
Ville de Lyon. Best red flowering variety Each, 50c; ten, \$4.00.

## SMALL-FLOWERING SORTS.

paniculata. From Japan. Panicles of small, pure white fragrant flowers borne in great profusion. Very desirable and entirely hardy. Blooms in late Summer.
2 yr., extra field grown .......... $\$ 0.25 \quad \$ 2.00 \quad \$ 12.0$
3 yr., extra field grown .......... . 35 3.00 15.00

## Euonymus (See Evergreen Shrubs)

## Hedera

Helix (English Ivy). Self-climber. This is well known, and its broad, glossy, dark leaves retain their beauty all Winter if planted on the eastern and northern sides of buildings away from the sun. It is hardy here.

| here. | Each | 10 | 100 |
| :---: | :---: | :---: | :---: |
| 1 yr. , in pots | . $\$ 0.25$ | \$2.00 | \$12.00 |
| 2 yr., in pots | . 35 | 3.00 |  |
| Field-grown | . 35 |  |  |

## Hydrangea

scandens (Climbing Hydrangea). Self climbing. One of the rarest and most beautiful vines cultivated, having flowers similar to Hydrangea Hortensia. Each, 50 cents.

## Jasminum (See Shrubs)

## Kudzu Vine

This is a most remarkable rapid-growing perennial vine, and is unparalleled for ornament and shade. If planted in rich soil will produce graceful, twining stems 40 feet long in a season. The beautiful pea-shaped flowers are borne in racemes 4 to 6 inches long, resembling miniature racemes of Wistaria.

## Lonicera - Honeysuckle

Belgica (Monthly Fragrant). Red flowers; bushy habit.

Each 10 2 yr. .............................................. $\$ 0.25$ \$2.00
Brachypoda (Japanese). Similar to Hall's E'vergreen Honeysuckle. Yellow flowers. $\begin{array}{cc}\text { Each } & 10 \\ \$ 100\end{array}$
 variety; quite conspicuous
2 yr .
Eac
$10 \quad 100$
(Hall's Japancse Ho. $\$ 2.00 ~ \$ 12.00$ robust growth; abundant foliage and good habit; blooms freely in June and intermittently afterward. Flowers cream yellow and very fragrant; the most common and the best sort. 2 yr ......
Heckrotti. A rare variety and one which should be grown, as its large and showy flowers are most attractive. Flowers are rose color on the outside and yellow in the center. Blooms all Summer. Each 10 2 yr . . $\$ 0.25 \quad \$ 2.00$ punicea (Scarlet Trumpet Honeysuckle). Very showy.

Each 10 2 yr. . ..................................... $\$ 0.25$. $\$ 2.00$
sempervirens (Red Coral). An American species bearing bunches of scarlet trumpetshaped flowers in latter June. More beautiful, but not so free blooming as the others and without fragrance.
2 yr .

Winter View of Evergreens.

## EVERGREENS

It is much to be regretted that the planting of Erergreens is so much neglected. They aid materially in giving color to the landscape in Winter; are useful for making windbreaks and hedges, and especially for screening unsightly objects from view; and there is, by judicious selection, a fine opportunity to afford pleasing contrasts of color and habit. They are more difficult to transplant than deciduous trees; must be carefully handled, upon no account permitting the roots to become dry. Use water abundantly and tramp the earth on the roots firmly.

The use of Evergreens in landscape adornment has increased greatly and their value for such purpose is warranted by experience. They add charm and color to any landscape, especially in winter. The dwarf sorts in variety are especialy adapted for planting in angles of porches and about the foundations of buildings. and their use in such places, add an air of distinction and beauty that no othe: class of plants can equal or even rival.

The variation in shades of green and their habit make them most fitting and attractive for such purpose. Large growing and choice sorts on the borders or in groups on the lawn are desirable, and their effectiveness for hedges and windbreaks is well known but too little appreciated.

Are best transplanted in April and May in Spring, and in latter August until November in Autumn. Use them freely and in handling expose the roots as little as possible, watering copiously when planted, and at intervals afterward until there are abundant rains.

Figures after specific names indicate approximately the height of the plant when approaching maturity.

## Abelia (See Deciduous Shrubs)

## Abies - Fir

balsamea (Balsam Fir). 40 feet. The wellknown native American Fir; very attractive while young, but grows unsightly with age.
$2-3$ ft. ....................................................... $\$ 1.00$
 cephalonica (Cephalonian Fir). Beautiful glossy dark green foliage. Grows in conical form.

Each
cilicica (Cilician Fir). A rery desirable variety growing to 50 feet high, with narrow, flat leares which are dark green above and white beneath. Perfectly hardy in the north.
12-18 in. ..........................................................
concolor (Colorado Fir). 35 feet. One of the choicest Evergreens, of distinct habit and color, which is a silvery green, and most attractive. Very rare and hardy. Each ${ }^{10}$

Mugho Pine. (See page 46.)

Weeping Hemlock. (See page 50.)

Hemlock Spruce. (See page 50.)

Retinispora Filifera. (Japan Cedar.) (See page 47.)

## ABIES-Continued

Douglasi (Pseudo Tsuga, Douglas Fir). One of the most desirable Firs. Of excellent, quick growth; dull green foliage.

Fraseri (Fraser's Silver Fir). 40 feet. Much resembles Balsam Fir in general appearance, but the color is more pronounced, and it has the merit of enduring beauty.

Nordmanniana (Nordmann's Fir). 30 feet. A noble tree, with large leaves of dark green color, maintained throughout the year.

Each 10
$\begin{array}{ll}21 / 2-3 & -21 / 2 \mathrm{ft} \text {. } \\ \mathrm{ft}^{2}\end{array}$
$\$ 1.00$

pectinata (European or Comb-like Silver Fir). 30 feet. Spreading horizontal branches. Foliage broad and silvery. Young shoots somewhat tender.

Each
$11 / 2-2 \mathrm{ft}$. $\$ 0.75$

Veitchii (Veitch's Silver Fir). 30 feet. A rare sort, combining the appearance of Nobilis and Nordmanniana. Small trees.

## Picea - Spruce

alba (White Spruce). 25 feet. A mediumsized native tree; close, pyramidal growth; foliage bluish gray. Each 10 | $11 / 2-2 \mathrm{ft}$. |
| :--- |
| $21 / 21 / 2 \mathrm{ft}$. |

| .3 .50 |  |

-conica. 25 feet. Of very dense and full conical form. Foliage of a lighter shade of color than the type. Each 10

-Gregoriana (Gregory's Spruce). 4 feet. Of dwarf, hemispherical form, dense habit and dark green foliage. Useful for cemeteries and small places. Each, $\$ 1.00$ to $\$ 2.00$.
-inverta (Inverted Norway Spruce). 10 feet. Of curious and varied form, the branches growing downward. Foliage dense.

—procumbens. A dwarf Spruce of spreading habit. Grows only about 4 feet high and slowly. Each, $\$ 1.00$ to $\$ 2.00$.
—pumila. 5 feet. Another dwarf and very dense sort with dark foliage. Entirely hardy. Each, \$1.50.
-pygmea (Dwarf Spruce). 2 feet. A dense dwarf variety, hardly ever growing more than 3 feet high. Each, \$1.50.
-pyramidalis. 25 feet. Like the Norway Spruce except the form, which is columnar. Effective in certain locations.

Each 5-6 ft. ................................................... $\$ 3.00$
nigra Doumetti. 6 feet. A dense and compact tree; needles small with a pronounced bluish tint. Each, \$1.25.
Omorika (Servian Spruce). A handsome variety of dwarf and compact habit; foliage a glaucous green, silvery underneath.

orientalis (Oriental Spruce). 40 feet. An erect-growing symmetrical tree. Foliage finer and better than Norway Spruce, and in every way a superior tree. Does not grow

polita (Tiger Tail Spruce). 25 feet. A slow grower, but distinct and valuable on account of its color and hardiness.

Each 10

 5-6 ft.
3.50
pungens (Colorado Spruce.) 35 feet. From the Rocky Mountains. A tree of great value; hardy in all locations; of good habit and form, and in color a cheerful tint of green. Each, \$1.00 to \$2.50.
-glauca. 35 feet. The Colorado Spruce seedlings are variable in color, running from light green to intense steel blue. They are alike in form and habit. Each

-Kosteriana (Koster's Blue Spruce). 35 feet. A strain of intense color and longer needles; preserved by grafting. They are uninformly reliable, and best for that reason.

|  | Each | 10 |

## Azalea

amoena. From China. Very dwarf and bushy foliage. which is abundant, becoming brown-ish-bronze in Winter. Entirely covered in May with masses of small dark red flowers. An entirely hardy shrub of singular beaty at all times, but especially showy when in

Benigiri. From Japan. A striking variety; brilliant-red flowers. An improvement over Hinodigiri.

Each 18-24 in. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 1.25$
Hinodigiri. A grand variety of compact bushy habit, bearing larger leaves than the Amœna. The plant grows in vigor with age, and in bloom is an object of great beauty, being literally covered with bright carmine-pink flowers. The finest shrub of recent introduction.
 ndica alba (Chinese White Azalea). Fine white variety, not entirely hardy, should be planted in sheltered spots.

Each 11/2-2 ft. . . . ............................................. $\$ 1.25$
Kaempferi (Rhododendron). A novelty, recently introduced from Japan. The flowers are not very large, but abundant, of a bright red color, foliage is small, shining dark green.

Each 10

Macrantha. A Japanese variety; flowering with large clear pink flowers of very good foliage.

Yodogawa. (See also Deciduous Shrubs.) Not entirely evergreen. Flowers handsome mauve color. Each 10

## Berberis

ilicifolia (Holly-leaved Barberry). 5 feet. Large, dark green Holly-like leaves, adherent until well into the Winter. A desirable variety.

| Each | 10 | 100 |
| :---: | :---: | :---: |
| .$\$ 0.40$ | $\$ 3.50$ | $\$ 30.00$ |
| .$\quad .50$ | 4.50 | 40.00 |

## Calluna Vulgaris - Scotch Heather

This plant should be more generally known. It is of the easiest possible culture, growing well in ordinary soils. Blooms continuously from Iuly to September. They are of a dwari nature and serve to cover banks and border beds of shrubbery. Each, 35 c ; ten, $s 3.00$

## Cedrus - Cedar

Atlantica glauca (Blue Cedar). 25 feet. Tigorous, pyramidal and open growth. Foliage of a light glaucous tint, rivaling the Blue Spruce in color effect.

Each
$3-\frac{1}{4 t}$.
82.00
$4-5 \mathrm{ft}$.
3.00

б-6 ft. ............................................. 33.50 to 5.00
Deodara (Deodar Cedar), 30 feet. Oi upright pyramidal form and graceiul silvery ioliage, which is more abundant than either of the other sorts. When young it excels both in beauty.

Each
$2 \cdot 3$ ft.
81. อ)

## Cotoneaster

Aplanata. A new variety. Large, glossy ioliage. Each, S1.00.
Horizontalis (Davidiana). One of the best Cotoneasters. Nearly climbing if planted near a wall. Its small shining leaves, with red berries during the Winter make it one of the finest shrubs.

Each 10

12-18 in. ................................... .ig 6.50
Macrophylla (Small-leaved Cotoneaster). An attractive, low, trailing bush, with very small, glossy. dark green leaves. Red berries in Winter.
$\begin{array}{cc}\text { Each } & 10 \\ .50 \\ 4.50\end{array}$
12-18 in.
.50

## Crataegus Pyracantha, Lalandi (Evergreen Thorn)

## Cryptomeria Lobbi, Compacta

30 ieet. A graceiul and handsome tree. It forms a rather narrow head of somewhat open growth. Foliage is light green and very distinct. Endures the Winter without injury in this latitude.

## Daphne

cneorum (Garland Flowers). Very dwari habit small, narrow, abundant foliage. The spreading horizontal branches are corered in Spring with light pink: rosette-like flowers of delicate iragrance.

## Euonymus

Sieboldi. Similar to Euonymus Japonica; foliage is not quite so thick and leathery and is hardier.

Each
18-24 in.
E0.35
Japonicus. A broad-leaved Evergreen of handsome color and form, but not entirely hardy.

radicans (Creeping Euonymus). An invaluable plant for covering bare spots in borders. A self-clinging vine or shrubby Evergreen bush as desired. Hardy.
12. 15 in., 2 yr.. bushy .....................s0.25 32.00 11.2 2 It. 3 Yr., bushy .............................................. 3.00
-Carrieri. Larger leaves than the ordinary Radicans. Tery good.
12.18 in.

Each
$30.35 \quad 33.00$
-variegata (Variegated Creeping Euonymus). Tery distinctly variegated with white, yellow and pink shades. An equally strong grower and very attractive on low walls.

-Vegetus. A very handsome large leai vari-ety- Good climber and conspicuous on account of the orange fruit produced in Autumn.
12-15 in.
Each

## Ilex - Holly

crenata (Tapanese Holly). \& iett. A much lauded and very attractive Holly from Japan, bearing small. shining. Mrytle-like leaves in great abundance. Not entirely hardy here. $15-18$ in. ......................................... Each 81.00

-Macrophylla. A small leaved variety of the above.

Each
12-15 in. ..................................................... Each
opaca (American Holly), 25 feet. A beautiful Evergreen, bearing red berries in abundance, contrasting finely with the bright green leaves. Each
$111_{2}-2 \mathrm{ft}$. Each
81.00

Picea excelsa-Norway Spruce.
(See page 41.)

Picea Pungens-Colorado Blue Spruce. (See page 41.)

Abies Concolor (White Fir).
(See page 39.)

Sciadopitys verticillata. (See page 49. )

## Juniperus - Juniper

Canadensis. 5 feet. A dwarf Juniper of bushy upright growth. Foliage is brownish green, resembling in general appearance Juniperus communis, but the latter is of more spreading habit of growth. Valuable for rockplanting.

Each
$\$ 0.50$

1
communis (Common Juniper). 3 feet. Our native prostrate or trailing Juniper, widely scattered over the temperate regions of America. Is of spreading irregular form, growing in rocky and nearly sterile soil in the most exposed situations. Valuable for covering slopes.

Each 10 $12-18 \mathrm{in}$. across $\$ 0.50$ $11 / 2-2 \mathrm{ft}$. across .75 $\$ 6.00$
-aurea (Douglas' Golden Juniper). 3 feet. Similar in habit and form to the preceding, but the foliage is beautifully tipped with golden color. Distinct and attractive.

-Cracovica. 6 feet. Of slow growth, pyramidal, very hardy. Foliage bluish green, and resembles much the following variety, which however grows more rapidly.

$\begin{array}{cc}\text { Each } & 10 \\ . \$ 0.50 & \$ 4.50\end{array}$ 12 | $11 / 2 \mathrm{in}$. |
| :---: |

.75
—Hibernica. 8 feet. The Irish Juniper is of very dense and upright habit. Fine for columnar effects in landscape work. Each 10

-prostrata. 3 feet. A very much more spreading plant than the type and very valuable for rockwork. Each
 $2_{-21 / 2}^{11 / 2^{-2}}$ ft. across . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 1.00
-Suecica (Swedish Juniper). 6 feet. More hardy than the Irish Juniper, but not so rapid in growth. Foliage of a yellowish-green tint.

Each 10

monticola (Mt. White Pine). The White Pine of the West. Does not grow so large as Pinus Strobus, but is a valuable tree and not subject to diseases. 75c each.
parviflora glauca. 15 feet. Imagine a white Pine with foliage tint of a blue Spruce and you will have a fair idea of the beauty of this tree.

Each
4-5 ft.
. $\$ 3.50$
ponderosa. A rapid-growing Pine, growing to large dimensions. Silvery-green foliage.

[^1]

## Retinispora - Japan Cedar

Botanists include all Retinisporas in two species-Obtusa and Pisifera-but we classify them as received, and in accordance with general custom. The whole family is especially desirable because of its varying forms, habits and character. Being of medium growth, they are adapted for small places and for use in Evergreen beds. They bear any amount of shearing, with improvement in density of foliage and change of form if desired. In addition to sorts here named, we offer a limited number of rare varieties.
ericoides. Grows very bushy. Feathery foliage; bronze green

Each

obtusa. 25 feet. One of the best Retinisporas. Color green in Summer, bronze in Winter.
$\qquad$
$\begin{array}{lll}2 & -3 \mathrm{ft.} \\ 3 & -4 \mathrm{ft} .\end{array}$
$\$ 1.00$

- ft. .................................................. 2.00
—aurea (Young). 20 feet. Identical with the preceding, except in color, which is of a pronounced golden tint. This is a most desirable tree because of its color, form and habit.

Each 3-4 ft.
. $\$ 2.00$
-compacta. 4 feet. This is a magnificent form of Obtusa, rery dense, with beautiful concave fronds, like green shells

Each
$\qquad$
 $\$ 0.70$

—gracilis. 8 feet. A most graceful and hardy little tree of good form. habit and color. One of the best semi-dwarf trees known.

| ft. | Each |

$2-21 / 2 \mathrm{ft}$.

Planting of Rhododendron Everestianum-View from our Office.

## Rhododendrons

There has been much money and labor wasted in futile efforts to grow Rhododendrons. These failures are occasioned by a number of reasons. First, the effort to grow sorts that are not hardy in our climate; second, to planting in thin and barren soil, and in exposed situations, where the winds of Winter rapidly evaporate the moisture in the plant.

Successful culture of Rhododendrons requires that the ground selected for the bed be prepared thoroughly by trenching and enriching, if possible, with leaf mould or decaying vegetable matter. They are moisture loving, liking partial shade and will be found naturally near streams and along the borders of woodlands. Reproduce these natural conditions as much as you can and plant in masses for best effect.

Do not dig about the plants since they are largely surface rooting. Let their leaves lie where they fall and add others. Such practice will conserve moisture. If you can, water copiously, particularly in late Autumn.

They are the most imposing and attractive of all shrubs in foliage, and when in bloom the most gorgeous. The hybrid sorts range in color from pure white to deep purple and singly or in masses are most striking and effective.

We offer hardy sorts and urge that selection be not extended. There are sorts bearing finer flowers but their possession will disappoint. The foliage is not good and the flower buds are often destroyed.

Catawbiense Alba, Boule de Neige, Chas. Dickens, Purpureum Elegans and Roseum Elegans are most reliable and satisfactory. For mass planting on borders of woodland use our native Rhododendron maximum.

Pick the flower clusters when faded. They are unsightly and seed making is exhaustive. In doing this be careful not to break out the new leaf buds which are developing from the base of the flower clusters.

Rhododendrons make a grand show in Winter and Summer alike, with their dark, shining Evergreen foliage, but are particularly attractive in early Summer, when their great masses of bloom of various colors and shades attract the attention of all. Where practicable, we urge their planting in masses, and a good plan is to have the foreground or border plants of Azaleas. The seed pods should be removed after flowering.

In arranging the larger native Rhododendrons ( $R$. maximum) as a background, these hardy named varieties produce a beautiful and striking effect planted in front toward the grass border.

## RHODODENDRONS—Continued

Great care has been exercised in including only such varieties as may be relied upon as entirely hardy in the Central and Northern States. And in the severe climate of New England these tested varieties of "ironclad" hardiness succeed with ordinary treatment.

| $11 / 2-2$ | $\mathrm{ft} .$, well budded | $\ldots$ |
| :--- | :--- | :--- | :--- |

album elegans. Large foliage; blush, changing to white.
Caractacus. Rich purplish crimson; fine.
delicatissimum. Blush white, tinted pink.
Dr. Torrey. Pink.
Everestianum. Rosy lilac, spotted and fringed; an excellent bloomer; fine foliage.
Grandiflora. Red.
Macrantha. Pink.
roseum elegans. Large leaves; rose-colored flowers.
roseum superbum. Good, clear rose color.

atrosanguineum. Intense blood red.
Abraham Lincoln. Beautiful rosy red. One of the best dark-colored varieties.
Boule de Neige. Pure white; dwarf, compact habit.
Charles Dickens. Dark scarlet; excellent foliage and habit.
General Grant. Bright rosy scarlet; fine.
Kettledrum. Deep red and fine.
Lady Armstrong. Beautiful pale rose, spotted.
Mrs. Milner. Rich crimson; good habit.
H. W. Sargent. Enormous truss; rich crimson.

Catawbiense, grandiflora. Purple. 1112-2 ft., well budded .................. Each 10
 $21 / 2-3$ ft., well budded .......................... 1.50
maximum (Great Laurel). Strong-growing, hardy plants, blooming profusely in July, long after the Catawbiense and its varieties are out of bloom. Flowers of good size, borne in dense trusses; color white, sometimes shaded with shell pink; indeed some plants have decidedly pink-shaded flowers. Largely used, in carload lots, for border and woodland planting. Collected, bushy plants of different sizes, 2 to 6 feet, carefully selected with ball, are furnished in quantity, by the carload at very reasonable prices.

roseum. A haximum with good foliage. Flowers light pink.

## Dwarf Varieties

Specially adapted to border and rock planting.

Good plants . . . . . . . . . . . . . . . . . . . . . . . . $\$ 1.00$ to $\$ 1.50$
Ferrugineum. A dwarf growing species. Flowers mauve pink. Good foliage.
Hirsutum. A species from the Swiss Alps. Flowers pale red.
Myrtifolium (Myrtle Leaved Rhododendron). Beautiful, small pink flowers. A compact grower with good dark green leaves.
punctatum. Flowers pink. Foliage larger than of the other kinds, also a more robust grower.
Wilsoni. A dwarf, dense form with splendid foliage. Pinkish flowers.

## Sciadopitys

verticillata (Umbrella Pine). 20 feet. A beautiful and hardy Evergreen from Japan. Shining dark green foliage arranged in whorls of umbrella-like tufts. Of slow growth but rare and desirable.

## Tsuga - Hemlock

A small genus, frequently classed with the Abies, but botanically distinct. As a class they possess remarkable grace and beauty.
Canadensis (Hemlock Spruce). 40 feet. The well-known tree of our American forests. Growth loose and open; habit extremely graceful. Bears shearing well, and makes the most ornamental evergreen hedge.

—macrophylla. 8 feet. A sport from our common Hemlock. Very dwarf and compact, and of dark green color. A very choice Evergreen and rare.
${ }_{2}^{11 / 2-2}-2 \frac{\mathrm{ft}}{\mathrm{ft}}$.
Each

Caroliniana (Carolina Hemlock). A new species from the Carolina mountains, not so stately as the common species. Small trees.

Sargenti pendula (Sargent's Weeping Hemlock). 10 feet. Compact and spreading habit, with graceful. spray-like pendulous branches. Permanent weeping habit. Beautiful Evergreen.
$\qquad$

## Yucca

filamentosa (Adam's Needle). Broad pointed leaves and in Mid-Summer immense panicles of Lily-like white flowers from center of plant attaining height of 4 to 5 feet.

[^3]2 yr.
3 yr .

Perennial Rock Garden, Viewed from our Office.

## HARDY HERBACEOUS PLANTS

The great and increasing popularity of this class of plants has induced us to offer a select list, which we made upon the advice of the best authorities in America, concerning the most effective and desirable plants for lawns and gardens.

Our list, while not so extensive as many, is the very cream of all, and every sort described may be depended on to give entire satisfaction.

Planted in the shrubbery border, or in beds alone, judiciously arranged, they will afford great satisfaction at much less cost than can be obtained by plants from the greenhouse that must be replaced annually. In truth, the one supplements the other, and the bright foliage and flowers of bedding plants, with the more enduring herbaceous ones, are both needed for the complete adornment of rural and suburban homes, but the latter are the most essential and appeal most strongly to our affections, appearing annually as old friends to greet us in Spring, after their Winter sleep.

A suitable selection will give a constant succession of bloom, from early Summer until late Autumn, and increase in size and beauty from year to year.

Figures after specific names indicate approximate height of the plants when in flower.
Prices of Perennials, except where otherwise noted, 15 cents each, $\$ 1.25$ per ten, $\$ 10.00$ per hundred. 5 plants of one kind will go at the 10 rate, 25 at the 100 rate.

## ACHILLEA - Milfoil, Yarrow

 millefolium roseum. 1 to 2 feet. Very handsome Fern-like foliage, flowers deep pink; July to September. One of the best.ptarmica (The Pearl). 1 to 2 feet. Double white; very effective; good for cutting; blooms all Summer. June to October.
-Boule de Neige. 1 to 2 feet. Double white flowers, resembling blossoms of Bridalwreath Spirea; continual bloomer; good for cutting. May to September.
tomentosa. 8 to 12 inches. June to September. A neat growing creeping evergreen, with bright yellow flowers; useful for cutting.

## ACONITUM

autumnale (Monkshood, or Helmet Flower). 3 to 4 feet. Flowers blue, in panicles. A fine flower for cutting. September. 25 c each.
Fischeri. 18 inches. A dwarf variety with very large, pale blue flowers in September and October.
Napellus. $3^{1 / 2}$ feet. June to September. Flowers dark blue. Fine.
-albus. A fine white flowered form. August. 25 c each, $\$ 2.00$ per 10.
-bicolor. Large blue and white flowers; one of the prettiest. August.

## ALTHAEA

rosea (Hollyhock). 4 to 5 feet. Of this oldfashioned and popular flower we offer a good assortment of colors, including the newly introduced and improved Allegheny Hollyhock and the single-flowering varieties.

## ALYSSUM

saxatile (Rock Madwort). 1 foot. Golden yellow flowers, fragrant and showy. One of the best perennials. April and May.
-compactum. (Basket of Gold, Gold Tuft, Rock-madwort). 1 foot. Similar to Saxatile, except the plant is more dwarf and flowers more freely.

## ANCHUSA

Italica (Sea Bugloss). 4 feet. A fine species, blooming from May to September. Clear blue flowers. 20c each.

## ANEMONE

All 20c each, $\$ 1.50$ per 10.
Japonica (Japan Windflower). 2 feet. Rosy pink flowers in September and October.
—alba. 2 feet. White; large flowers. September and October.
-Queen Charlotte. 2 feet. Large, semidouble flowers; silvery pink in color. September.
—rosea. 2 feet. Very floriferous. Flowers semi-double, rosy purple in color. September.
-Whirlwind. 2 feet. Producing double white flowers in great profusion in September and October.

## ANTHEMIS

tinctoria, Kelwayi (Marguerite). 1 to 2 feet. Flowers deep yellow. July to October.

## AQUILEGIA

Columbine. 1 to $2 \frac{1}{2}$ feet. In colors; early Spring bloom. April to July.

## ARABIS

alpina (Rock Cress). 6 to 8 inches. Flowers white, in small racemes in early Spring. April to June.
rosea. Pink flowered Arabis.

## ARMERIA

formosa (Thrift). 12 inches. Pink to white. May to August.

## ARENARIA

cæpitosa (Sandwort). 3 inches. Dwarf Evergreen plants, tufted foliage, forming carpets of verdure. May.

## ASCLEPIA.

tuberosa (Butterfly Weed). 2 feet. Orangecolored flowers. July and August. 20c each.

## ASTER

alpinus. 9 inches. Purple flowers in July.
Amellus (Perry's Favorite). 3 feet. New, of very fine pink color.
Beauty of Colwall. 3 feet. Novelty, fine double purple.
Novæ-Angliæ. 4 feet. Showy purple. September and October.

Robert Parker. 5 feet. Large sprays of large soft lavender-blue flowers with yellow center. Fine.
Snowflake. 3 feet. White, dainty small flowers; very free.
White Queen. 5 feet. Large white, free flowering.

## BOCCONIA

cordata (Plume Poprv). 6 to 7 feet. White flowers. August.

## BOLTONIA

asteroides (False Chamomile). 4 feet. White flowers. August and September.
latisquama. 4 feet. Light lilac. August and September.

## CAMPANULA.

Carpatica (Bell Flowers). 9 inches. A dwarf plant bearing blue flowers in June.
-alba. 9 inches. White flowers. June and July.
Media (Canterbury Bells). 3 feet. Late in June and July. Flowers blue, white and pink. Very showy. Is biennial.
-Calycanthema. 3 feet. Cup and saucer Canterbury Bells. Flowers resemble in shape a cup and saucer. June to July.
persicifolia. $11 / 2$ feet. Flowers blue. June and July.
—alba plena. $1 I / 2$ feet. Double white. July.
-Moerheimi. 2 feet. June and July. An excellent variety; large, pure white flowers; semi-double.
pyramidalis. 3 feet. Blue flowers.

## CENTAUREA

macrocephala (Corn Flower). 3 feet. July to September. Tall habit, fine foliage and terminal stems of deep yellow flowers.
Montana. 20 inches. June to September. Showy, large purple flowers; fine for cutting. 25 c each, $\$ 2.00$ per 10 .

## CHRYSANTHEMUMS

$11 / 2$ to $21 / 2$ feet. In colors. Autumnal blooming plants of much beauty and exceedingly profuse. bloom. Hardy sorts only.
Shasta Daisy. 1 to 2 feet. White, flowers all Summer.
uliginosum (Pyrethrum. Giant Daisy). 2 feet. White. August and September.

## CLEMATIS

Davidiana. 2 to 3 feet. Very showy and fragrant blue flowers in August and September.

## CONVALLARIA

majalis (Lily of the Valley). 4 to 8 inches. White, pendent, fragrant flowers in early Spring. Clumps. 20c each.

## COREOPSIS

grandiflora (Tickseed). $11 / 2$ to 2 feet. Deep orange yellow; excellent for cutting. June and July.
rosea. 12 to 18 inches. July and August. Rosy flowers, very free.

## DAHLIAS

Good assortment.

## DELPHINIUM

elatum (Hardy Larkspur). 3 to 4 feet. Blue flowers from June to August.
Bella Donna. 3 feet. A beautiful soft shade of blue. Very distinct; flowers all summer. 20c each, $\$ 1.50$ per 10.
coelestium. $11 / 2$ to 3 feet. Double, pale blue flowers; center violet and dark blue.
formosum. 3 feet. The common Larkspur. Large dark blue flowers. June to August.
Sinensis. 3 feet. Fine cut foliage; blue flowers. July.
-Alba. Same as above; flowers white.

## DESMODIUM-See Deciduous Shrubs DIANTHUS

barbatus. 1 foot. The old and deservedly popular Sweet William. Various colors mixed. June to July.
-latifolia atrococcinea. 1 foot. Fiery crimson flowers in large clusters throughout the Summer and Fall.
plumaris (Scotch Pink, or Cinnamon Pink). 1 foot. Very fragrant double flowers. June and July.
-Carmen. 1 foot. Light pink, fragrant flowers.
-Gertrude. 1 foot. Rosy carmine, veined with silvery white.
-Her Majesty. 1 foot. Very large, double white and exceedingly fragrant. Flowers in June.

## DICENTRA

spectabilis (Bleeding Heart). $11 / 2$ feet. Pink flowers in May. 20c each, $\$ 1.50$ per 10.

## DICTAMNUS

fraxinella (Gas Plant). 2 feet. Flowers purple, borne on upright stems in June. 20c each.

## DIGITALIS

Foxglove. 2 to 3 feet. An old and wellknown species bearing on long spikes an abundance of large and showy blossoms, varying from white to purple. July.

## ECHINACEA

purpurea (Cone Flower). 3 feet. Enduring rosy purple flowers. July to September. 25 c each, $\$ 2.00$ per 10.

## EUPATORIUM

purpureum (Perennial Ageratum). 5 to 6 feet. A strong-growing plant with branching heads of purple flowers in late Autumn.

## FUNKIA

lancifolia variegata (Plantain Lily). 1 foot. Handsome foliage distinctly margined with creamy white and yellow. Flowers light purple in July.
subcordata (White Day Lily). 1 foot. Pure white trumpet-shaped flowers and very fragrant. September. 20c each, $\$ 1.50$ per 10.

## GAILLARDIA

grandiflora (Blanket Flower). 2 feet. Large yellow flowers with maroon center. All Summer.

## GEUM

atrosanguinea (Avens). Attractive, low-growing border plant of easy culture. Large dark red flowers in open heads; blooms all Summer. 1 to 2 feet.

## GYPSOPHILA

paniculata (Baby's Breath). 2 feet. Small white flowers in great abundance. July to September.

## HELENIUM

autumnale superbum (Rock, or Sun Rose). 4 feet. Flowers yellow, in profusion in September.
Riverton Gem. 3-4 feet. Yellow with bronzered shading.

## HELIANTHUS

multiflora, fl. pl. (Sunflower). 4 feet. Large, double yellow flowers. July to October.
Miss Mellish. 6 feet. A tall growing kind; large foliage and bright orange-yellow flowers; fine. August to September.
Mollis. 5 feet. August and September. Elegant lemon-yellow flowers and heavy velvety foliage.

## HELIOPSIS

Pitcheriana (Orange Sunflower). 2 to 3 feet. An improved Heliopsis blooming profusely in August and September. Yellow or orangecolored flowers.

## HEMEROCALLIS

aurantiaca major. $2 \mathrm{I} / 2$ feet. A robust-growing sort bearing an abundance of large bright orange-colored flowers in July.
Dumortieri. $11 / 2-2$ feet. May to July. Orangeyellow flowers with bronze tint.
flava (Yellow Day Lily). 2 feet. One of the best hardy plants, bearing yellow, fragrant flowers in June.

## HEUCHERA

sanguinea (Alum Root). $11 / 2$ feet. Flowers bright red, borne on long stems projecting above the foliage. Blooms all Summer.

## HIBISCUS

Moscheutos (Mallow; malva). 3 feet. Pink flowers in July and August.
-Crimson Eye. White flowers with crimson center. July and August.

## HOLLYHOCKS-See Althea Rosea <br> IRIS - Fleur de Lis

This is the well-known Flag of our meadows. Always a sightly plant in bloom, but recently much improved in size of flowers and in colors, which are, indeed, indescribable. They do best in deep, moist soil, but will reward the planter with abundant showy flowers in all situations.
Germanica (German Iris). $1 \mathrm{~T} / 2$ feet. Blooming in latter May and June.
Kaempferi (Japan Iris). 2 feet. These are later blooming and, if possible, have more gorgeous colors and greater variety of bloom. June to August. 20c each. $\$ 1.50$ per 10.
pallida dalmatica. 2 feet. Flowers light blue, large and fragrant. June.
pumila cyanea. $1 / 2$ to 1 foot. Dwarf kind, blue flowers, very early. April and May.
Sibirica. 2 feet. Deep blue flowers in clusters. A fine bloomer. One of the best Iris. May.

Papaver Orientalis-Oriental Poppy. (See page 55.)

Peony, Festiva Maxima.
(See page 55.)

Hardy Aster-Michaelmas Daisy.
(See page 52.)

Platycodon grandiflora-Bellflower. (See page 57. )

Anemone Japonica Japanese Wind Flower.
(See page 52.)

Stokesia Cyanea-Stokes Aster.
(See page 57.)

## IBERIS

sempervirens (Evergreen Candytuft). 6 to 12 inches. A hardy and attractive plant at all times, but particularly when covered with its white flowers in April.

## LATHYRUS

latifolia (Hardy Sweet Pea). 6 feet. A rampant growing and trailing plant bearing all Summer flowers in purple, rose and white colors. Good for covering rocks and stumps. July to September.

## LIATRIS

elegans (Blazing Star, or Gay Feather). 1 foot. Bluish-purple flowers. August.

## LINUM - Flax

perenne. 18 inches. May to August. Handsome, light blue flowers.

## LOBELIA

cardinalis (Cardinal Flower). $11 / 2$ fect. Scarlet. August and September.

## LYCHNIS

Chalcedonica (Scarlet Lychnis). 3 feet. Brilliant scarlet flowers in large clusters. June. diurna f. pl. 2 feet. Flowers double, crimson. Blooms at intervals all Summer. Good for borders.
viscaria. $11 / 2$ feet. Bears rosy-pink flowers in masses on long spikes. Very brilliant and showy. June.

## LYSIMACHIA

clethroides (Loosestrife). $11 / 2$ feet. White flowers. July to September.

## LYTHRUM

salicaria roseum. 2 feet. Rosy purple flowers. Very showy. June and August.

## MALVA

moschata (Mallow). 2 feet. July to September. Fragrant flowers in clusters, of a rosy tint.
var. alba. Exceptionally attractive; white fragrant flowers.

## MONARDA

didyma (Horse Mint, Oswego Tea). 2 feet. Scarlet. August and September.

## MYOSOTIS

palustris (Forget-Me-Not). 6 inches. Light blue flowers with yellow centers, blooming May to August.

## CENOTHERA

Evening Primrose. 15 to 18 inches. Snowy white and yellow flowers. June to August.

## PACHYSANDRA

terminalis (Japanese Spurge). A low dense evergreen plant with glossy foliage, forming large mats, well adapted for covering the ground, especially in moist or shaded situations. Native of Japan. Flowers white, disposed in small terminal spikes in mid Spring.

## PEEONIAS

No flower, old or new, is more rapidly or more deservedly advancing in reputation today than the Pæony. Its easy culture and its en-
tire freedom from insects and disease would alone recommend it, but when, in addition. you consider its most attractive foliage, and more especially its immense double flowers in almost all shades of color, and generally their delightful perfume, you have a record of valuable points that no other flower can equal. Price, 35 c each, $\$ 2.50$ per ten.
Anemone flora rubra. Semi-double; bright scarlet.
Couronne d'Or. White. Yellow stamens.
Delachi. Dark purplish. crimson; large and fine.
Duchess de Nemours. Creamy white; fine. new sort.
Duke of Wellington. Sulphur white. A new importation.
Edulis superba. One of the finest. Silvery pink.
festiva. White; free blooming.
-maxima. White with carmine markings in center; extra large and fine.
Faust. Pink.
globosa. Pink; large full flower.
grandiflora rubra. Red.
Lady Dartmouth. White tinged with blush.
Louis van Houtte. Bright red.
Mac Mahon. Wine-red.
Magnifica. Light pink.
Marion des Holmes. White.
Meissonier. Deep red.
Modiste Guerin. Deep pink: large flower
officinalis rubra. Early. Satiny crimson.
-mutabilis. Nearly white.
-rosea. Deep rosy pink.
-tenuifolia flore pleno. Bright red.
Pulcherrina. Salmon pink.
purpurea. Red.
Rose d'Amour. Delicate Pink.
roseum elegans. Pink.
rubra triumphans. Bright red.
solfatare. Sulphur yellow.
Zoe Calot. Delicate rose.

## PAPAVER

nudicaule (Iceland Poppy). 1 foot. A dwarf variety with deeply lobed leaves and yellow and white flowers. June to August.
orientale (Oriental Poppy). 2 feet. Orange and scarlet. June.

## PENTSTEMON

barbatus (Beard Tongue). 2 to 3 feet. Scarlet. June to August.

## PHLOX

decussata or paniculata. 1 to 3 feet. The varieties of these most satisfactory perennials have been greatly multiplied in recent years, but the sorts we offer run through nearly the whole range of color and shades, and will, in general effectiveness, be quite as satisfactory as a hundred varieties. Of course, the collector and the enthusiast will only be satisfied with all, and he will enjoy the nursuit probably more than the possession.
Anthony Mercier. Bluish white.
Coquelicot. Fiery red flowers.
Eclaireur. Purple carmine, white center; large flower.
Elizabeth Campbell. Best pink.
Fraulein von Lassburg. Pure white, large flower.
Gen. van Heutz. One of the latest introductions, salmon pink, of a delicate shade.

Aquilegia-Columbine.
(See page 52.)

Campanula Carpatica-Bell Flower or Harebell. (See page 52.)

Digitalis-Foxglove.
(See page 53.)

Achillea-Yarrow.
(See page 51.)

Coreopsis-Tickseed.
(See page 52.)

Hibiscus-Mallow
(See page 53.)

## PHLOX-Continued

Joan of Arc. White.
Independence. White; large.
La Vogue. Silvery pink: large flower.
Madam Langier. Salmon pink; dark eye.
Matador. Large flower, brilliant orange red with cherry-red eye.
R. von Hochsburg. Deep wine red.

Selma. White, rose center. Fine.
Terre Neuve. Light lavender; a dwarf sort.
Thebaide. Light pink; dwarf; free flowering.
Suffruticosa. A species much like the preceding, but the foliage is much better and the bloom in the two sorts named comes earlier and lasts longer; indeed, they bloom intermittently all Summer.
-Laphami. A new kind, clear sky-blue delicate flowers. Very handsome. 20c each, $\$ 1.50$ per 10.
-Indian Chief. Deep magenta with crimson eye. Very early, flowering in May.
-Miss Lingard. 2 feet. White with pink eye.
amœna (Creeping Phlox). Pink flowers in early Spring.
subulata. Pink and white. 4 inches. Good for rockwork, borders or bedding, literally covering the ground in April with a mass of flowers.

## PHYSOSTEGIA

denticulata (False Dragon Head). 4 feet. Faint rosy-pink flowers. July and August.

## PLATYCODON

grandiflorum (Balloon Flower, or Japanese Bell-Flower). $11 / 2$ feet. Blue and white bellshaped flowers. June to September.
Japonica fl. pl. $1 \mathrm{I} / 2$ feet. Double deep blue flowers. June to October.

## PLUMBAGO

Larpentæ (Leadwort). 9 inches. Purplishblue flowers in abundance. September and October.

## PRIMULA

veris superba (English Cowslip). 8 inches. A fine variety, with large yellow flowers. April and May.
vulgaris (English Primrose). 6 to 9 inches. One of the earliest Spring flowers; pale yellow, very fragrant.

## PYRETHRUM - Persian Daisy

$11 / 2$ feet. A most valuable class of hardy plants bearing, on long stems, flowers in different shades of color, pink. white and red. Flowers are much like the double Aster. Especially good for cutting, as the flowers are very lasting. Named varieties. May and June.

## RUDBECKIA

laciniata fl. pl. (Golden Glow). 5 feet. Very showy, well-known and popular; late Summer.
nitida (Autumn Glory). Very tall; large, yellow, single blooms. August till October.
purpurea (Cone Fower). 2 to 3 feet. July to October. Large, handsome, crimson-purple flowers, with dark central disk.

## SALVIA

azurea (Meadow Sage). 2 feet. Blue flowers in July and August.

## SAXIFRAGA - Rock Foil

cordifolia. 1 foot. Large feathery foliage, deep green during the Summer, turning to bronze-red in Winter. A good rockery and border plant.

## SCABIOSA - Mourning Bride

caucasica. 2 feet. Lilac-blue flowers, on good stems for cutting. June to September.
Japonica. 2 feet. A Japanese variety producing beautiful blue flowers in great abundance. August to September.

## SEDUM

acre (Wall Pepper). 3 inches. Handsome evergreen foliage and bright yellow flowers. A good carpet plant.
Kamtschaticum. 4 to 9 inches. July, August. Bright pulpy evergreen foliage, with golden flowers in flat clusters.
spectabile (Stone Crop, Showy Sedum). 2 feet. Rosy-purple flowers in flat cymes in late Summer.

## SOLIDAGO

Canadensis (Golden Rod). 4 feet. Yellow. September and October.
lanceolata. 3 feet. Yellow; August and September.

## STOKESIA

cyanea (Cornflower Aster). 1 foot. Lavender blue. A free-flowering, handsome plant suitable for the border or rockery. July to October.

## TRADESCANTIA

Virginica (Spider Wort). 1 foot. Blue flowers. June to September.
—alba. 1 foot. Like the preceding, except that the flowers are white.

## TRITOMA

Uvaria (Red Hot Poker Plant). 3 feet. Orange scarlet to salmon; an extremely profuse bloomer; good for bedding. July to October.

## TROLLIUS - Globe Flower

Europæus. 18 inches. A valuable border perennial, with large globular, lemon-colored. buttercup-like flowers on long stems. Grows in almost any soil.

## THYMUS - Thyme

lanuginosus (Woolly Thyme). A trailing plant, with small leaves of grayish color, making it a handsome variety for edging.

## VERONICA - Speedwell

spicata. 1 foot. Silvery leaves; slender spikes of blue flowers. June to August.
longifolia subsessilis. 2 feet. Amethystineblue flowers; very fine. August to September.

## VINCA

minor (Periwinkle). 6 inches. Blue flowers in May.
The Periwinkles are valuable for covering bare spots under trees and on banks.

## VIOLA CORNUTA - Violas or Tufted Pansies

The improved forms of Viola Cornuta are one of the important bedding plants of Europe. They are but little known here, but are certain to become general favorites. If planted in a partially shaded bed, they will flower continuously for nearly eight months in the year; and while their flowers are not so large
as those of the Pansy, their bright colors and floriferousness will make them welcome additions to any garden.
-Admiration. Soft purple with dark blotch. - Blue. Sweet-scented, lavender-blue flowers in Spring; prefers moist, open places.

- -Geo. Werning. A fine, new variety, of a pretty blue shade, much resembling in color the hardy Violet.
-White Perfection. A white-flowered variety; sweet scented.
odorata (Prince of Wales). Deep, violet blue; sweet scented.

YUCCA-See Evergreens

To aid purchasers in selecting plants specially adapted for certain locations or specific purposes, we make here some short lists that will, we believe, prove helpful.

## FOR CUT FLOWERS

Achillea ptarmica. White. All Summer.
Althæa rosea. (Hollyhocks.) All colors. July. Anemone Japonica. All colors. Sept. and Oct. Anthemis tinctoria. Yellow. June and July. Aquilegia. All colors. April and May.
Asters. Purple and rose. Sept. and Oct.
Boltonia. Lilac and white. Aug. and Sept.
Campanula. Blue and white. June and July.
Chrysanthemum. All colors. Sept. and Oct.
Coreopsis. Yellow. June and July.
Delphinium. Blue. June and July.
Dianthus. All colors. June and July.
Dicentra spectabilis. Pink. May.

## FOR CARPETING THE GROUND

Anemone. (Wind Flower.) White. Phlox subulata. (Creeping Phlox.) Pink and white.
Lysimachia. (Moneywort.) Yellow
Myosotis palustris. (Forget-Me-Not.) Blue.
Pachysandra terminalis. (Pachysandra.) White.

Sedum. (Stonecrop.) Yellow.
Veronica. (Iron Plant.) Blue.
Vinca minor. (Periwinkle.) Blue.

## FOR THE ROCK GARDEN AND DRY ARID LAND

Aquilegia. (Columbine.) In variety and colors. Arabis Alpina. (Rock Cress.) White.
Armeria maritima. (Sea Pink.) Rosy purple.
Heuchera sanguinea. (Alum Root.) Coral red.
Iberis. (Candytuft.) In variety. White.
Asclepias tuberosa. (Milk Weed.) Orange yellow. Campanulas. (Harebell.) Blue and white.
Campanulas. (Harebell.) Blue and white.
Lathyrus latifolia. (Hardy Pea.) In colors.
Liatris. (Liatris.) Blue

Gypsophila paniculata. (Baby's Breath.) White.
Lychnis. (Tar Pink.) In variety. Pink and red.
Pachysandra terminalis. (Pachysandra.) White.
Sedum. (Stonecrop.) Pink, rose and yellow.

## FOR LOW GROUNDS

Hibiscus Moscheutos. (Marsh Mallow.) Pink and white. Lobelia cardinalis. (Cardinal Flower.) Brilliant red. Iris Germanica. (German Iris.) In all colors. (Horse Mint.) Red. Iris Kæmpferi. (Japan Iris.) In all colors. Myosotis palustris. (Forget-Me-Not.) Sky blue.

Spiræa, Herbaceous. (Meadow Rue.) In variety and colors.

## Hardy Grasses

All the ornamental Grasses are suitable for planting as single specimens, in masses or along the shrubbery border, and we highly recommend their use.

15 c to 20 c each, $\$ 10.00$ per hundred.
ARUNDO
donax (Giant Reed). 10 to 15 feet. A handsome tropical-looking plant; very effective and striking. Needs some protection during the Winter.

## ARUNDINARIA

nitida. 5 feet. A handsome hardy Grass of recent introduction.

## PHALARIS

arundinacea variegata (Ribbon Grass). Large variegated foliage; valuable for bouquets and for edging large beds.

## EULALIA

Japonica. 5 to 6 feet. A beautiful hardy Grass from Japan; foliage a deep green surmounted in Autumn with long flower spikes, bearing purplish flowers of very enduring character. Can be cut and dried for Winter decoration.
gracillima univittata. 5 to 6 feet. Fine, hardy. ornamental Grass; leaves narrow and dark green; silver white midrib; very handsome and attractive.
variegata. 4 to 5 feet. Similar to the preceding in all respects except its leaves are beautifullv variegated with white and sometimes pink and yellow stripes.
zebrina. 4 to 5 feet. The leaves of this sort are marked with broad yellow bands at right angles, and are very striking and handsome.

## IFRUIT DEPARTMENT

We have greatly abridged our former lists, retaining what we believe are the most desirable kinds. We do not attempt here to give cultural directions, further than to state that all fruit trees delight in a good, well-drained soil. We advise enough pruning to admit air and light freely. In small gardens and yards we urge the advisability of using dwarf trees rather than standards. or, if the latter are used, that the heads be kept low. By doing so it will be much easier to treat the trees and to control the insect pests that are so generally distributed throughout the country.

Intending purchasers who propose planting in large quantity are requested to correspond with us, naming number and sorts of trees wanted, when special quotations will be given.

## Apples

The first fruit. both in importance and general culture, is the Apple. Its period, unlike that of other fruits extends nearly or quite through the year. Bv planting judicious selections of Summer, Autumn and Winter sorts, a constant succession can be easily obtained of this indispensable fruit for family use.

## SUMMER VARIETIES.

*Astrachan, Red. Large, nearly covered with deep crimson, overspread with a thick bloom. August.
*Early Harvest. Medium size; round; straw color; tender, sub-acid and fine; productive. August.
Sweet Bough. Large; pale greenish yellow; tender and sweet. August.
*Yellow Transparent. A very early Russian Annle of good quality. Color pale yellow. Last of July.

## AUTUMN VARIETIES.

*Fall Pippin. Very large, yellow; tender, juicy and rich. October.
*Gravenstein. Large and beautiful; tender. juicy and high flavored. September and October.
Maiden's Blush. Large, smooth, with a fine, red cheek; flesh white. September and October.
Oldenburg. Medium to large size; skin yellow, streaked with red; flesh juicy and good. September.
*Wealthy. Medium, roundish; skin smooth, oily, mostly covered with dark red; flesh white, fine, juicy, vinous, sub-acid, very good. Very hardy. A variety of great value, on account of its hardiness. October.

## WINTER VARIETIES.

*Baldwin. Large, deep bright red; very productive. The most popular Winter Apple. January to April.
Ben Davis. Large, handsome and of fair quality; productive; a late keeper. December to March.

Greening, Northwestern. Fruit medium to large, averaging from 7 to 8 ounces each and very uniform in size. Color greenish yellow. Tree is very hardy and a thrifty grower, an early and continuous bearer. January to June.
*Greening, Rhode Island. Large; light greenish yellow; tender and juicy. November to March.
Grimes Golden. Highest quality: medium to large; golden yellow, sub-acid, spicy and rich. January to March.
King Tompkins. Large and handsome; striped red and yellow. November to May.
*McIntosh. Large, roundish, skin mostly covered with bright red; flesh white, tender, sub-acid, sprightly, very good. Handsome; hardy. November to February.
*Northern Spy. Large, with the sunny side nearly covered with purplish red; rich and delicious flavor. January to June.
Russet, Golden. Medium size, dull russet, with a tinge of red; flesh greenish, crisp, juicy and highly flavored; hardy, bears well. November to April.
Stayman Winesap. One of the finest Apples grown for appearance, flavor and juiciness. A favorite for cider. Medium size, conical; mostly covered with red on yellow ground; flesh fine, crisp and high-flavored. November to April, but keeps well to May.
*Spitzenburg (Esopus). Medium to large; deep red; flesh crisp, high flavor. November to April.
Winesap. Medium; dark red; sub-acid, excellent; abundant bearer. December to May.
York Imperial. Medium, white, shaded with crimson; flesh firm and sub-acid. December to February.

## *Can be supplied in dwarf form. <br> Apples, Crab

As an ornamental fruit, and for jellies, preserving, etc., the Crab Apple is unequaled. All are hardy and prolific, come into bearing when young, and command a ready and profitable market.
Hyslop. Large, dark red, with a blue bloom; flesh yellow; excellent for cider; hardy.
Siberian, Red. Medium, round, dark red; for preserving.
Siberian, Yellow. Amber or golden color. Fine for preserves.
Transcendent. Tree immensely productive. Fruit of good size. Color red and yellow.

Bartlett Pear ( $1 / 2$ size). (See page 62.)

Wealthy Apple ( $1 / 2$ size). (See page 59.)

Imperial Gage ( $1 / 2$ size). (See page 62.)

Moore Grape. (See page 63.)

Carman Peach ( $1 / 2$ size)
(See page 61.)

Black Tartarian (1/2 size) (See page 61.)

## Apricots

The Apricot, in quality and appearance, is between the Plum and the Peach, combining quality of both. Its very early season of ripening and delightful flavor make it one of the most valuable fruits. We are now able to offer varieties that are extremely hardy and will endure severest climates. The Apricot requires the same cultivation as the Plum or Peach, and for curculio the same treatment as the Plum. $\$ 1.00,75 \mathrm{c}$ and 50 c each.

## Cherries

The Cherry tree universally requires a dry soil and is naturally a hardy tree, succeeding in the lightest soils or driest situations. The Heart and Bigarreau varieties are of rapid growth, with large, glossy leaves, forming fine, pyramid-shaped heads, and producing large crops of luscious fruit; are well adapted for planting along streets or in yards as shade trees. We especially recommend Cherry trees as most suitable and satisfactory for gardens and small yards in towns and villages.

## HEART AND BIGARREAU.

Black Tartarian. Very large; excellent flavor. June.
Gov. Wood. Light red; juicy, rich and delicious; tree healthy and a great bearer. June.
Napoleon. Very large; pale yellow or red; very firm, juicy and sweet. July.
Windsor. Fruit large, liver colored; flesh remarkably firm, sweet and of fine quality. July.
Yellow Spanish. Large; pale yellow. with red cheek; one of the best light-colored Cherries. June.

## DUKE AND MORELLO.

These are for the most part round-shaped trees; fruit generally acid, though some varieties have a very mild, pleasant flavor. The trees are smaller than the preceding class, and well adapted for dwarfs. The Morellos are more slender and spreading in habit than the Dukes, which are of a stocky, upright growth. Both are more hardy than the Hearts and Bigarreaus.
Early Richmond. Medium size; dark red; sprightly acid flavor. This is one of the most valuable and popular of the acid Cherries. June.
Large Montmorency. A large, red, acid Cherry; larger than Early Richmond, and fully ten days later. June.
May Duke. An old, well-known, excellent variety; large. dark red; juicy, sub-acid, rich. Middle of June.

## Mulberries

## See Deciduous Ornamental Trees. <br> Nectarines

The Nectarine requires the same culture and management as the Peach, from which it differs only in having smooth skin like the Plum. 75c each.

## Nut Trees <br> CHESTNUTS.

American. Our native species; sweet, excellent Nuts. \$1.00 each.
Japan. Nuts very large, often five in a burr; commence bearing at an early age. \$1.00 each.

## FILBERT.

English. Fruit larger than our native species and preferable in localities where it will succeed. In sorts named. 50c each.

## SHELLBARK - Hickory.

Our trees are grown from extra fine thinshelled Nuts. \$1.00 each.

## WALNUT.

Black. The well-known native species; hardy, prolific and valuable for timber and Nuts. $\$ 1.00$ each.
English. This rich and fine-flavored Nut is quite hardy with us, and makes a vigorous growth. $\$ 1.00$ each.
Japan. From Northern Japan, and as hardy as an Oak. The leaves are of immense size and of a charming shade of green. The Nuts, produced in abundance, grow in clusters. The meat is sweet, of best quality; vigorous tree of handsome form. They bear young and are hardier and more productive than the English Walnut. \$1.00 each.

## PERSIMMON. \$1.50 each.

## Peaches

The Peach tree requires a well-drained, moderately rich soil-a warm, sandy loam is best.

In order to preserve the continued healthy growth of the trees and the fine quality of the fruit, the trees should have the shoots and branches shortened every year, so as to preserve a round, vigorous head, with plenty of young wood.

Examine the trees carefully and extract and destroy the borer. Use potash manures liberally.

## EARLY PEACHES

Carman. August. Large, bright red cheek: white flesh, good flavor and regular bearer. Champion. August. White freestone peach; rich, sweet and juicy.
Crawford's Early. August and September. A large yellow peach of good quality.
Greensboro. July. Good size; round, with red cheek; flesh white; medium quality. Heavy bearer.
Hiley (Hiley Early Belle). July. Large size with delightful red cheek; flesh is white, tender and exceedingly juicy; free. One of the best shippers among the early peaches and invariably brings top prices. Should be planted freely to make full assortment for commercial orchards.
Mountain Rose. August. Red, freestone Peach, wtih white flesh; rich, juicy, sweet.

## PEACHES—Continued

Ray. August. Fruit extremely large; skin creamy white, tinted with crimson and shades of yellow. One of the handsomest Peaches we have ever seen. Flesh white, with no stain at the stone; of the most excellent quality, juicy, delicious, tender and keeps well. An excellent shipper, of fine appearance, even after much handling. An exceedingly strong grower; shapely and symmetrical.
St. John. July. Yellow; free.

## MID-SEASON PEACHES

Belle of Goergia. August and September. Freestone; white; excellent flavor and a regular bearer. Best of its season.
Elberta. Early September. A very large, yellow, freestone peach; rich. sweet and juicy. A vigorous grower and splendid sort for preserving.
Fitzgerald. August and September. Large, round freestone; red cheek; flesh yellow, sub-acid and agreeable.
Old Mixon Free. September. Large, white freestone; of excellent flavor and productive.
Stump. September. Large freestone; white with red cheek; firm, juicy and excellent quality.
Willett. A new variety said to be of excellent quality; largest yellow Peach of medium late season.

## LATE PEACHES

Crawford's Late. September. Large, yellow freestone; good quality.
Fox Seedling. Late September. Reliable freestone; white flesh; best of its season.
Iron Mountain. October. Late freestone; flesh white. A productive, reliable late Peach of good quality.
Reeves Favorite. September. Large yellow, with fine red cheek; delicious, juicy. Freestone; best quality. Shy bearer.
Smock. Late September. Large; oval; light yellow, mottled red; freestone.

## Pears

Standard Pear trees prefer a strong loam, but succeed well in a great variety of soils, and upon almost any land that will produce good crops of vegetables or grain. The fruit will keep longer and the flavor be greatly improved by picking before they are quite mature, and ripening them in the house. By judicious selection of varieties their season can be extended from July to January.

Dwarf Pears are suited to garden culture, or where space is limited. Can be planted 8 to 10 feet apart, and deep enough to cover the union of the stock and scion, and be trained low by proper shortening of the terminal branches.

The letters " $D$ " and "S", appended to the description of varieties, indicate favorable growth. either as "dwarfs" or "standards" or
both. Those designated as "moderate growers" are usually smaller trees.

PEARS—Standard

| -Sta |  |  |  |

| Medium grade, $1 / 2-5 / 8$ in., $2-3 \mathrm{ft}$. | B | . 35 | 2.50 |

## SUMMER VARIETIES.

Bartlett. Large size; juicy and high flavored. D. and S. August and September.

Clapp's Favorite. Large size; vinous, melting and rich. D. and S. August.
Wilder. Medium size, fine grained; flavor sub-acid; quality very good. S. August.

## AUTUMN VARIETIES.

Beurre d'Anjou. Large; greenish russet. with a rich excellent flavor. D. and S. October to January.
Duchesse d'Angouleme. Very large; very juicy, with a rich flavor. Succeeds well as a dwarf. D. and S. October and November.
Flemish Beauty. Large, rich and fine. D. and S. August and September.

Kieffer. A robust-growing and handsome tree, practically immune from all insect attacks. A most prolific and early bearer of large and, when properly ripened, handsome fruit, of fair and sometimes superior quality, the condition of soil and treatment determining the last factor. For canning it is unrivaled. S. October and November.

Lawrence. Large; yellow, flesh slightly granular with a rich, aromatic flavor. S. November and December.
Seckel. Small; yellowish brown when ripe, with a brownish red cheek; flesh fine grained; highest flavored Pear known. D. and S. September and October.
Sheldon. Good size; yellow or russet; flesh juicy with a brisk, vinous flavor. S. October.

## Plums

A heavy soil is undoubtedly best for the Plum. The ravages of the curculio have proven a great drawback to the culture of this delicious fruit. The most successful cultivators save their crops by spreading a sheet under the tree, and then by sudden jars the diseased fruit and insects will be shaken off; these should be carefully destroyed.

|  | Each | 10 | 00 |

|  | . 35 | 2.50 |  |

Abundance. Japan. An early bearer; fruit very large and tender, with a rich sweetness; has a small stone which parts readily from the flesh. First of August.
Bradshaw. European. Fruit very large; dark violet red; flesh yellowish green, juicy and pleasant. August.
Burbank. Japan. Crimson purple; very handsome and of good quality; hardy and productive. August.

## PLUMS—Continued

Fellemberg. French or Italian Prune. Large. oral; purple; juicy and delicious: parts from the stone; fine for drying. September.

German Prune. European. A large, long, oval variety, much esteemed for drying; color dark purple, of very agreeable flavor. September.
Imperial Green Gage. European. Fruit large, oval, skin pale green; flesh juicy and sweet. August.
Lombard. European. Medium, rounded oval; violet red; juicy, pleasant and good; adheres to the stone; a valuable market variety. - August.

October Purple. One of Luther Burbank's Hybrids and considered by him one of his best. Large purple; yellow flesh; very late.
Red June. Recommended by Prof. Bailey as the best Japanese Plum, ripening before Abundance. August.
Wickson. Originated by Mr. Burbank, who says: "Among the many thousand Japan Plums I have fruited so far this one stands pre-eminent in its rare combination of good qualities."
Yellow Egg. European. Very large, oval; yellow, with white bloom; flesh yellow; Eweet. Middle of August.

## Quinces

|  | Fach | 10 | 100 |
| :---: | :---: | :---: | :---: |
| Extra, 3/1-1 in., 4-6 ft. ........ XX | \$1.00 |  |  |
| Extra, ${ }^{\text {¢ }}$ 's in., 3-5 ft. ............ X | . 75 | \$6.50 |  |
| First grade, 7-16 in., 3-4 ft. .....A | . 0 | 3.50 | \$25.00 |
| Medium grade, $1 / 2 \mathrm{in}$., $21 / 2-3 \mathrm{ft}$... M | . 35 | 2.50 | 15.00 |

Apple, or Orange. Large; bright golden yellow; the most popular variety. October.
Bourgeat. Vigorous grower, producing abundantly fine fruit of good quality.
Champion. A prolific and constant bearer; fruit larger than Orange, and ripens later. October and November.
Meeches'. Productive of fine fruit of best quality. Unsurpassed for culinary use.

## Blackberries

10c each, $\$ 5.00$ per hundred.
Plant in good soil, moderately manured. Rows 7 feet by 3 feet for field culture. Cut away old, and cut back new wood in Winter. Form a hedge or tie to wire. Cultivate shallow.
Blowers. A new large Blackberry; very hardy and productive.
Early Harvest. Very early and reliable; berries small but sweet and of the highest quality.
Erie. Early, hardy and productive. Fruit large and sweet.
Lucretia (Dewberry). A trailing form of the Blackberry, bearing large, luscious fruit. 15c each.
Rathbun. Berries extra large, jet black. Flesh iuicy, high flavored.

## Currants

15 c each, $\$ 9.00$ per hundred.
The Currant worm is easily controlled by using white hellebore or Paris green in solution, and using it in season, before the bushes are defoliated. Cut out all old wood and as much new as may be necessary to give room for proper development of leaves and fruit. Currants and Gooseberries love a deep moist soil, and a heavy mulch is excellent.
Black Lees. Very large; fine for jams or jellies.
Cherry. The largest of all the red Currants.
Fay. Color deep red; an excellent sort.
White Grape. Large; yellowish white; excellent quality; finest white sort.
Perfection. Extra large red berries. 25c each.

## Grapes, Hardy Varieties

We urge everyone to plant Grape Vines to supply their own table. No fruit is more easily grown or is more luscious and wholesome. Soil should be warm and dry and of good quality. Under such conditions the Grape will thrive in a very limited space. Plant 6 to 8 feet apart, and from 4 to 6 inches deep. pressing the dirt firmly around the roots. Dig the hole large enough to take in the roots without crossing each other. Grape vines can be trained over fences. trellises or doorways. and thus be ornamental as well as useful. 25 c each.

## BLACK GRAPES.

Campbell. An early Grape of good quality.
Concord. Well known and popular. The best variety.
Moore. A seedling of Concord; of good quality.
Worden. A seedling of Concord, which it greatly resembles in appearance and flavor; but ripens several days earlier.

## RED GRAPES.

Agawam. Rogers' No. 15. Large; peculiar aromatic flavor.
Brighton. Bunches large: berries medium size; flesh sweet and of the highest quality.
Catawba. Bunches large and loose; berries large.
Delaware. Best quality; berries small; flesh very juicy; vine moderatelv vigorous.
Salem. Rogers' No. 22. Berry large: thick skin; free from hard pulp; sweet and sprightly.

## WHITE GRAPES.

Green Mountain. Vine hardy, vigorous and productive; skin thin; ripens early. 35 c each.
Diamond. Vine a vigorous grower and prolific: bunches large and compact; color delicate greenish white, with rich yellow tinge when fully ripe. Ripens before Concord.
Niagara. A strong grower and hardy; bunches large and compact; berries as large as Concord: quality good. Best all-around white Grape.

## Gooseberries

Require the same treatment as Currants; good high culture, and relentless warfare against the Currant worm.

## AMERICAN VARIETIES.

Downing. Fruit large, roundish, light green, with distinct veins; juicy and good; vigorous and productive. 20c each.
Houghton. Medium size, bears abundant and regular crops; fruit smooth, red. 15 c each.
Red Jacket. A new Gooseberry of high promise. $15 c$ each.

## ENGLISH VARIETIES.

The varieties of English Gooseberries are almost innumerable; the fruit large and handsome and of high quality. We offer only the sorts best adapted to our climate, most of them being unreliable because of mildew.
Industry. Vigorous upright growth; very productive and a good market variety. Color dark red; of agreeable flavor. 25 c each.
White Smith. Fruit large, roundish, oblong; best quality. 25c each.

## Raspberries

10c each, $\$ 5.00$ per hundred.
Cumberland. The best blackcap Raspberry. Size large; of highest quality.
Cuthbert (Queen of the Market). Red; very productive. The standard red Raspberry.
Golden Queen. Hardy, vigorous, productive and of good quality.
Japan Wineberry. A showy plant. It bears large crops of fruit of exceptional value for jams and jellies.
Kansas. A superior blackcap.
St. Regis. A variety said to produce fruit for four months. Brilliant crimson; good quality.

## Strawberries

Layer plants in April, October and November.

Pot-grown plants in August, September and April.
Plant in April, September to November, in good ground, deeply worked and well manured. Set in rows 3 feet by 15 inches for field culture, and 15 inches each way for garden, leaving a pathway at every third row. Cultivate clean, mulch late in the Fall, uncover crown early in the Spring. Make new plantations annually in rich, well prepared soil.

Pot-grown plants, $\$ 2.50$ per 100 .
Layer plants, $\$ 1.00$ per 100.
Those marked ( P ) have pistillate or imperfect flowers and must be planted near perfectflowering kinds, in order that the flowers may be fertilized to obtain fruit.
Chesapeake. An exceedingly handsome, highcolored large berry of extra fine quality; ripens early.
Gandy. One of the standard market berries; ripens late; firm and of good quality.
Glen Mary. A superb variety which unites large size, great productiveness and good quality. Early.
Oom Paul. A good berry.

## Asparagus

To make a good Asparagus bed the plants may be set in the Fall or early Spring. Prepare a piece of fine, loamy soil, to which has been added a liberal dressing of manure. Select two-year or strong one-year plants, and for a garden set in rows 20 by 12 inches.
We offer Conover and Palmetto. \$1.00 per 100.

## Rhubarb or Pieplant

This affords the earliest material for pies and tarts; continues long in use and is valuabie for canning. Make the border very rich and deep. 15 c each.

## DISTANCE BETWEEN TREES OR PLANTS IN PLANTATIONS

Standard Apples. 30 to 40 feet apart each way. In poor soil, 25 feet may be enough.
Standard Pears and Cherries. 20 feet apart each way. Cherries will do at 18 feet and the dwarf-growing sorts, Dukes and Morrellos, even at 16 feet.
Standard Plums, Peaches and Apricots. 16 to 18 feet apart each way.
Quinces. 10 to 12 feet apart each way.
Dwarf Pears. 10 to 12 feet apart each way. The greater distance is better where land is not scarce.
Dwarf Apples on Paradise Stock (Bushes). 6 feet apart.
Currants, Gooseberries and Raspberries. 3 to 4 feet apart.
Blackberries. 6 to 7 feet apart.
Grapes. 8 to 10 feet apart.
Strawberries. (See under Strawberries.)

## INSECT REMEDIES

White Hellebore and Pyrethrum. Preferably in water, 1 ounce to 3 gallons; or dry, mix with $1 / 4$ part of flour to make it adhesive. Hellebore and Pyrethrum are used chiefly on ripening fruit, as they lose their poisonous properties when exposed to the air for a few hours.

Arsenate of Lead. 1 to 5 pounds per 100 gallons. It does not burn the foliage. It is especially desirable for
its sticking properties for all fruits and for some truck: crops. It is also easy to prepare and easy to apply.
Tobacco Water. Boil stems and strain liquid. Add water to make 2 gallons of liquid to each pound of stems used. For soft-bodied insects : The efficiency of tobacco water will be increased by stirring in 1 pound of whale oil soap to each 50 gallons.
Lime-Sulphur. Lime, 20 pounds; sulphur, 15 pounds; water to make 50 gallons. Boil one to two hours with a small quantity of water, then dilute to 50 gallons with boiling water. Do not let mixture become cold; spray while yet warm. For Winter or early Spring use.
Kerosene Emulsion. Hard soap, $1 / 2$ pound ; boiling water, 1 gallon; kerosene, 2 gallons. Dissolve the soap in the water, add the kerosene, and churn with a pump for five or ten minutes. Dilute 10 to 25 times before applying. Use strong emulsion for all scale insects. For insects which suck, as plant lice, mealy bugs, red spider, thrips, bark-lice or scale. Cabbage worms, and all insects which have soft bodies, can also be successfully treated.
Soluble Oil Preparation. There are now a number of these on the market that are giving most excellent results, and are particularly recommended for the treatment of plants infested with San Jose scale.

## SPRAYING

In regard to this all important subject we would recommend our patrons to communicate with the Experiment Station in the state in which they live and get definite instructions about spraying for their particular locality, in bulletins published for this purpose.
